PepsiCo products are enjoyed by consumers more than one billion times a day in more than 200 countries and territories around the world. PepsiCo generated more than $63 billion in net revenue in 2017, driven by a complementary food and beverage portfolio that includes 22 brands that generate more than $1 billion each in estimated annual retail sales (e.g., Frito-Lay, Gatorade, Pepsi-Cola, Quaker and Tropicana). At the heart of PepsiCo is Performance with Purpose (PwP) – our goal to deliver top-tier financial performance while creating sustainable growth and shareholder value. In practice, PwP means providing a wide range of foods and beverages from treats to nutritious eats; trying to find innovative ways to reduce our impact on the environment and lower our operating costs; working to provide a safe and inclusive workplace for our employees globally; and respecting, supporting and investing in the local communities where we operate.

Cautionary Statement - Statements in this submission that are “forward-looking statements” are based on currently available information, operating plans and projections about future events and trends. Terminology such as “aim,” “anticipate,” “believe,” “drive,” “estimate,” “expect,” “expressed confidence,” “forecast,” “future,” “goal,” “guidance,” “intend,” “may,” “objective,” “outlook,” “plan,” “position,” “potential,” “project,” “seek,” “should,” “strategy,” “target,” “will” or similar statements or variations of such terms are intended to identify forward-looking statements, although not all forward-looking statements contain such terms. Forward-looking statements inherently involve risks and uncertainties that could cause actual results to differ materially from those predicted in such forward-looking statements. Such risks and uncertainties include, but are not limited to: changes in demand for PepsiCo’s products; changes in, or failure to comply with, applicable laws and regulations; imposition or proposed imposition of new or increased taxes aimed at PepsiCo’s products; imposition of labeling or warning requirements on PepsiCo’s products; changes in laws related to packaging and disposal of PepsiCo’s products; PepsiCo’s ability to compete effectively; political conditions, civil unrest or other developments and risks in the markets where PepsiCo’s products are made, manufactured, distributed or sold; PepsiCo’s ability to grow its business in developing and emerging markets; uncertain economic conditions in the countries in which PepsiCo operates; the ability to protect information systems against, or effectively respond to, a cybersecurity incident or other disruption; increased costs, disruption of supply or shortages of raw materials and other supplies; business disruptions; product contamination or tampering or issues or concerns with respect to product quality, safety and integrity; damage to PepsiCo’s reputation or brand image; failure to successfully complete or integrate acquisitions and joint ventures into PepsiCo’s existing operations or to complete or manage divestitures or refinancings; changes in estimates and underlying assumptions regarding future performance that could result in an impairment charge; increase in income tax rates, changes in income tax laws or disagreements with tax authorities; failure to realize anticipated benefits from PepsiCo’s productivity initiatives or global operating model; PepsiCo’s ability to recruit, hire or retain key employees or a highly skilled and diverse workforce; loss of any key customer or disruption to the retail landscape; any downgrade or potential downgrade of PepsiCo’s credit ratings; PepsiCo’s ability to implement shared services or utilize information technology systems and networks effectively; fluctuations or other changes in exchange rates; climate change or water scarcity, or legal, regulatory or market measures to address climate change or water scarcity; failure to successfully negotiate collective bargaining agreements, or strikes or work stoppages; infringement of intellectual property rights; potential liabilities and costs from litigation, claims, regulatory, or legal proceedings, inquiries or investigations; and other factors discussed in the risk factors section of PepsiCo’s filings with the Securities and Exchange Commission. Investors are cautioned not to place undue reliance on any such forward-looking statements, which speak only as of the date they are made. PepsiCo undertakes no obligation to update any forward-looking statements.

<tbody>
<tr>
<td>Board/Executive board</td>
<td>Under PepsiCo’s By-Laws and Corporate Governance Guidelines, the board has the responsibility to manage the business of the Company. Sustainability matters, including climate change, are integrated into our business. Therefore, the board considers them an integral part of its business oversight. To clarify its role, the board amended PepsiCo’s Corporate Governance Guidelines in 2015 to add “sustainability” to the key aspects of PepsiCo’s businesses over which the board has oversight. In 2016, PepsiCo reviewed our sustainability governance structure to strengthen the integration of Performance with Purpose (PwP) into our business agenda. The PepsiCo Executive Committee (PEC) then assumed direct oversight of the sustainability agenda, including strategic decisions and performance management. The PEC is made up of the chairman &amp; CEO, the president, the CFO, sector CEOs and functional heads, ensuring that sustainability is a key accountability for every member of our senior leadership team.</td>

(C1.2a)
(C1.2a) Describe where in the organizational structure this/these position(s) and/or committees lie, what their associated responsibilities are, and how climate-related issues are monitored.

Dr. Mehmood Khan, PepsiCo’s chief scientific officer and vice chairman, who reports directly to our chairman and CEO, oversees the company’s Performance with Purpose (PwP) program. With his background as a physician, with expertise in endocrinology, metabolism and nutrition, Dr. Khan brings deep science-based knowledge and insights to guide the company’s product portfolio transformation efforts, as well as an intimate understanding of the challenges and opportunities that lie at the intersection of food, the environment and people. Dr. Khan is involved in the day-to-day management of our strategy toward delivery of our PwP agenda, and his responsibilities include providing strategic direction, guidance and leadership on critical climate-related issues facing the Company and actions the Company must take. Climate-related issues monitoring and overseeing the delivery of our climate goal under PwP fall directly under the responsibilities of Dr. Khan. Each quarter, Dr. Khan is apprised of our progress towards our climate goal and related issues. Based on this, Dr. Khan is involved in aligning the PepsiCo Executive Committee (PEC) and the board on strategic decisions toward mitigating climate risks, enhancing PepsiCo’s reputation and positioning the business for future success.

C1.3

(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?
Yes

C1.3a

(C1.3a) Provide further details on the incentives provided for the management of climate-related issues.

Who is entitled to benefit from these incentives?
Corporate executive team

Types of incentives
Monetary reward

Activity incentivized
Emissions reduction target

Comment
Our corporate executive team has strategic objectives based on an individual executive’s role and accountabilities that are aligned with Performance with Purpose (PwP), which is our goal to deliver top-tier financial performance while creating sustainable growth in shareholder value. Performance against these objectives impacts a portion of both annual and long-term incentives.

Who is entitled to benefit from these incentives?
Chief Executive Officer (CEO)

Types of incentives
Monetary reward

Activity incentivized
Emissions reduction target

Comment
Our executive officers, including our chairman and CEO, have strategic objectives based on an individual executive’s role and accountabilities that are aligned with PwP, which is our goal to deliver top-tier financial performance while creating sustainable growth in shareholder value. Performance against these objectives impacts a portion of both annual and long-term incentives.

Who is entitled to benefit from these incentives?
Business unit manager

</tr>
</tbody>
</table>

C2.2b
At the company level, to align with our Performance with Purpose (PwP) 2025 agenda, our board refined the roles of its committees in 2017 by creating a new Public Policy and Sustainability Committee. This committee assists the Board in providing more focused oversight over the company’s policies, programs and related risks that concern key sustainability matters. The committee, which meets three times per year, beginning in 2017, is comprised entirely of independent directors, and was carefully chosen to represent expertise in the scientific, financial, technological and non-profit sectors. The primary agenda item for these meetings is a review of PepsiCo’s company-wide progress on our PwP goals, including progress against our goal to reduce greenhouse gas (GHG) emissions across our value chain by 20% in absolute terms by 2030. At one level below the board, the PepsiCo Executive Committee (the CEO and each of her direct reports), meets quarterly to review progress against PwP goals; progress against broader environmental risk mitigation (such as our efforts to mitigate supply chain-wide risk due to water scarcity and packaging); and to ensure that we are adapting our sustainability strategy to changes in science, stakeholder expectations and marketplace conditions. Other risks considered at each level of our business include changes in agricultural raw material supply due to climate change-driven impacts, regulatory initiatives (e.g., The European Union Emission Trading System (EU-ETS)), and impacts of increased water-related risks.

At the asset level, our manufacturing plants report key environmental performance data, including GHG emissions, on a monthly basis – these data are used to evaluate performance against targets and as an assessment of progress in mitigating environmental risk to the region. We also conduct focused risk assessments on climate change-related risks such as water-related risk assessments for our manufacturing operations. These are conducted using the World Resources Institute’s (WRI) Aqueduct and site-level input and focus on physical, regulatory and reputational risks currently and into the longer term (>5 years). We also assess and manage our packaging as a risk area related to climate change. Regulatory pressure related to packaging is being fueled by increased nongovernmental organization (NGO) activity and media coverage, including attention to ocean plastic pollution and associated public health concerns. In response, we have developed a sustainable packaging strategy to help mitigate these risks and also deliver emission reduction benefits. Our strategy for sustainable packaging focuses on the following areas: 1) developing packaging that is recyclable, compostable and biodegradable; 2) working to increase recycling of product packaging in the marketplace; 3) working to reduce greenhouse gas impacts of packaging by increasing recycled PET (rPET) content in plastic bottles and light-weighting; and 4) exploring collaborations and technologies that reduce our dependence on plastic.

Once climate risks have been identified, the next step in our process is to prioritize each risk based on the likelihood that it will occur, the financial impact to PepsiCo should it occur (any impact over $1 million is considered substantive), and whether the activities needed to mitigate the risk are aligned with our overall climate strategy and business plan. For example, we incorporate environmental sustainability criteria into our Capital Expenditure Filter, which is applied to all capital expenditure requests over $5 million. Each request is reviewed not only against business financial metrics and value to advancing our business strategy but also for the impact (positive or negative) that it will have on our environmental performance, including energy use and GHG emissions, and its contribution to our efforts to achieve our climate goal.
Which of the following risk types are considered in your organization’s climate-related risk assessments?

<table>
<thead>
<tr>
<th>Risk Type</th>
<th>Relevance &amp; Inclusion</th>
<th>Please Explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current regulation</td>
<td>Relevant, always included</td>
<td>Current regulation, such as cap and trade schemes under the European Union Emission Trading System (EU ETS) and the California cap and trade mechanisms, impact certain PepsiCo facilities located in Europe and California. Our Public Policy and Government Affairs (PPGA) global and sector teams continuously monitor these regulations and we invest in energy efficiency and emission mitigation strategies in our covered facilities. We operate our facilities at the highest environmental performance standards and continuously monitor our emissions performance.</td>
</tr>
<tr>
<td>Emerging regulation</td>
<td>Relevant, always included</td>
<td>Our PPGA team monitors new regulations around the globe to better prepare PepsiCo and mitigate the inherent financial risks associated with fuel/energy taxes and regulations. Additionally, team members engage with lawmakers and other stakeholders in the regulatory process and also submit official comments to achieve desired environmental goals while avoiding detrimental impacts on the business community.</td>
</tr>
<tr>
<td>Technology</td>
<td>Relevant, always included</td>
<td>Technological developments are closely monitored by PepsiCo’s Research &amp; Development (R&amp;D) teams focused on external innovation. Any emerging technological advancements on the horizon with the ability to aid PepsiCo in delivering our PWP goals are evaluated and internally deliberated upon for appropriate action.</td>
</tr>
<tr>
<td>Legal</td>
<td>Relevant, always included</td>
<td>Our PPGA teams monitor legal and regulatory developments around the globe to advise PepsiCo on the best course of action. In addition, our Environmental Health and Safety (EHS) teams ensure our facilities are operated with full legal compliance with relevant local regulations.</td>
</tr>
<tr>
<td>Market</td>
<td>Relevant, always included</td>
<td>Market-specific risks are monitored and evaluated by our local PPGA teams. For example, climate-related risks arising from packaging and the specific mitigation strategy for each market and business unit are discussed at that level in order to prioritize activities.</td>
</tr>
<tr>
<td>Reputation</td>
<td>Relevant, always included</td>
<td>Any negative perception (whether valid or not) of PepsiCo’s response to climate change or water scarcity could result in adverse publicity and could adversely affect PepsiCo’s business, financial condition or results of operations. We monitor this risk through our global and local PPGA teams who work with governments, as well as nongovernmental organizations to understand relevant issues and advise accordingly. We make efforts to reduce this risk by communicating about our Performance with Purpose (PwP) goals and activities related to climate and packaging, as well as water, through various avenues such as the updated 2017 Sustainability Report and detailed A-Z topics on our website for 2017.</td>
</tr>
<tr>
<td>Acute physical</td>
<td>Relevant, always included</td>
<td>Physical climate-related impacts are most relevant in the day-to-day operations of our facilities, especially related to resource use. We have a robust environmental, health and safety (EHS) monitoring system deployed in all of our manufacturing sites, and we collect and analyze our EHS data on a regular basis to gain insights on management of environmental resources. We implement several energy efficiency, water efficiency and water quality measures within our facilities to mitigate this risk.</td>
</tr>
<tr>
<td>Chronic physical</td>
<td>Relevant, always included</td>
<td>PepsiCo has undertaken several initiatives to lessen our dependence upon climate-sensitive commodities. For example, to assess and mitigate the risk in temperature and precipitation impact, PepsiCo has implemented our Sustainable Farming Program (SFP) (formerly our Sustainable Farming Initiative, or SFI), which enables our company-owned and contract growers to compete in a resource-constrained future.</td>
</tr>
<tr>
<td>Upstream</td>
<td>Relevant, always included</td>
<td>Our Pwp climate goal encompasses our entire value chain, therefore, upstream supply chain risks are carefully evaluated in our mitigation plans. Our SFP works with our growers to understand emissions, and risks associated with it, and provides trainings on management methods to allow our growers to compete in a resource-constrained future.</td>
</tr>
<tr>
<td>Downstream</td>
<td>Relevant, always included</td>
<td>Our Pwp climate goal encompasses our entire value chain, therefore, downstream supply chain risks are carefully evaluated in our mitigation plans. For example, our vending and cooling program was launched in order to assess and mitigate the energy impacts of our equipment downstream where our products are distributed to consumers.</td>
</tr>
</tbody>
</table>
Describe your process(es) for managing climate-related risks and opportunities.

PepsiCo has identified climate change as a business risk through our Integrated Risk Management Framework, a process that identifies, assesses, prioritizes, manages, and monitors the risks affecting the Company across its operations. Our management processes for climate risks and opportunities include: 1) We have integrated a greenhouse gas (GHG) reduction target into our Performance with Purpose (PwP) strategy, PepsiCo's vision to deliver top-tier financial performance over the long term by integrating sustainability into our business 2) Climate strategy and actions are reviewed and managed in the context of our short and long term business strategy 3) Climate change risks are included in our Annual Report on Form 10-K. Several aspects of climate change have influenced our strategy, including a) the need for our business to adapt to a changing environment driven by rising temperatures and fluctuating weather patterns that affect our supply chain; and b) the opportunity to develop a product portfolio that includes fewer GHG-intensive and water-intensive products. Our long-term strategy has been influenced by Climate change through our merger and acquisition strategy. We have embedded mechanisms to quantify the impact of growth and M&A activity on our ability to deliver our Climate goal into our investment allocation processes, as well as integrating a requirement for business units to conduct a water-related risk assessment prior to any major acquisition. We believe that our climate change strategy is industry-leading and will support our efforts to build PepsiCo's reputation as a leader in environmental sustainability, potentially translating into competitive advantage with our customers and consumers.

PepsiCo's Public Policy and Government Affairs (PPGA) teams spend considerable amount of time monitoring and evaluating current and upcoming regulations related to climate change, as well as monitoring industry trends and engaging with our stakeholders. For example, current and emerging cap and trade regulations are flagged by our PPGA teams as a transition risk so that the Company can take appropriate steps to mitigate impacts. As a result, our facilities measure their greenhouse gas emissions and document in our internal Environmental Health and Safety (EHS) system. This allows PepsiCo to then make informed decisions about energy efficiency, conservation efforts and investments to be made in order to manage risks from these regulations.

Our Sustainable Farming Program (SFP) (formerly our Sustainable Farming Initiative, or SFI), which reflects industry best practice, helps position us and our farmers to compete more effectively in a resource constrained future. Through the program, we are working with our farmers to reduce physical climate change impacts of farming practices, improve soil health, and improve water use efficiency. The acute and chronic physical risks posed by climate change in our upstream supply chain for the commodities that our business largely relies on, are managed through this program. In collaboration with our supply chain partners and growers, we are building a more resilient ingredients supply chain.

Company-specific description
Under Phase 3 of the European Emission Trading System (EU-ETS), which took effect January 1, 2013, individual energy consumers with combustion capacity exceeding 20 MW must report fuel consumption and submit allowances. This requirement applied to five PepsiCo facilities in 2017: Leicester and Peterlee in the UK, Burgos in Spain, Veurne in Belgium and Bol in the Netherlands with Grodzisk in Poland joining in 2018. The EU has committed to cut greenhouse gas emissions by at least 40% by 2030 against a 1990 baseline. One of the principal mechanisms for achieving this reduction is the EU-ETS, which the individual EU member states administer. Under the EU-ETS, a covered facility must report its annual fuel consumption to national authorities, and then submit one allowance for each metric ton of CO2 or CO2 equivalent emitted. Additionally, enforceable compliance obligations under California’s cap and trade program took effect January 1, 2013. This law requires the Frito-Lay plant in Bakersfield, California to participate in the program.

Time horizon
Current

Likelihood
Virtually certain

Magnitude of impact
Medium

Potential financial impact
630000000

Explanation of financial impact
The cost of complying with cap and trade schemes will vary based on the market price of the allowances, as well as any changes in allocation. In the event that more stringent regulation is enacted and is more aggressive than the sustainability measures that we are currently undertaking to monitor our emissions and improve our energy efficiency, we may experience increases in our costs of operation and delivery. For example, approximately 1% of net revenue could be at risk due to regulation and commodity inflation, which for 2017 net revenue could equate to approximately $0.63 billion.

Management method
To reduce carbon emissions, and address the inherent financial risks of cap and trade, PepsiCo invests in energy efficiency and other clean energy technologies such as anaerobic digestion. We also ensure that our facilities have strong environmental management systems in place such as PepsiCo's Global Environmental Health & Safety Management System (GEHMS). We expect these management methods to reduce the risk to our business concerning increased operating costs over the next several years as we become more energy and carbon efficient through our investments and resource conservation program (ReCon). For example, in 2017, we made key investments in high efficiency lighting, building management systems, solar photovoltaics, combined heat and power plants, and converted our last coal boiler in the U.S. to fire on natural gas.

Cost of management
62000

Comment
We have integrated monitoring systems to collect and analyze data, which are then subjected to external auditing by Bureau Veritas. The cost associated with administrating the annual environmental sustainability data analysis, including personnel time and the expense of the external auditing firm, is approximately $62,000.

Policy and legal: Increased pricing of GHG emissions

Type of financial impact driver
Policy and legal: Increased operating costs (e.g., higher compliance costs, increased insurance premiums)

Company-specific description
Biofuel mandates, gasoline taxes and other taxes and regulations designed to lower the carbon profile of primary energy may affect our costs for energy and/or raw material inputs. For example emerging clean fuel standard regulation in Canada can impact our operating costs for our company-owned fleet in this country, as well as increase costs for third party logistics procurement for distribution of our products.
Time horizon
Short-term

Likelihood
More likely than not

Magnitude of impact
Medium

Potential financial impact
630000000

Explanation of financial impact
Approximately 1% of net revenue could be at risk due to regulation and commodity inflation, which for 2017 net revenue could equate to approximately $0.63 billion.

Management method
Management efforts of our Global Public Policy and Government Affairs (PPGA) teams are to inform regulatory process and facilitate effective rule implementation within PepsiCo. The teams monitor new regulations around the globe to better prepare PepsiCo and help mitigate the inherent financial risks associated with fuel/energy taxes and regulations. Additionally, team members engage with lawmakers and other stakeholders in the regulatory process and also submit official comments in an effort to achieve desired environmental goals while avoiding detrimental impacts on the business community. For example, in 2017, we became the founding members of the Climate Leadership Council to promote a carbon dividends framework as the most cost-effective, equitable and politically-viable climate solution.

Cost of management
0

Comment
No additional management costs. These costs are embedded into our global policy monitoring process.

Identifier
Risk 3

Where in the value chain does the risk driver occur?
Supply chain

Risk type
Physical risk

Primary climate-related risk driver
Chronic: Changes in precipitation patterns and extreme variability in weather patterns

Type of financial impact driver
Reduced revenue from decreased production capacity (e.g., transport difficulties, supply chain interruptions)

Company-specific description
Mean precipitation increases or decreases could lead to change in supply patterns for key crops such as potatoes, oranges and oats, potentially higher transportation costs, potentially higher commodity costs and uncertainty of crop availability. We continuously monitor our operations and sourcing from high water risk areas using the Aqueduct tool from the World Resources Institute (WRI), as well as internal assessments. Our Sustainable Agriculture team is working with our growers in these high water risk areas to improve agricultural water use efficiency as part of our Performance with Purpose (PwP) objectives in the supply chain.

Time horizon
Medium-term

Likelihood
More likely than not

Magnitude of impact
High

Potential financial impact
1000000000

Explanation of financial impact
Changes in average precipitation can disrupt crop yields and locations. Such an event could significantly impact PepsiCo’s revenues with increased commodity prices and transportation costs. Using a hypothetical example, financial implications could
include a significant loss of agricultural raw material supply up to order of 10% which would equate to $1 billion against an annual
spend of about $10 billion according to 2015 procurement data. Our hedging costs could vary drastically due to an increase in
perceived risk in the commodity markets.

Management method
PepsiCo’s goal is to operate in a sustainable manner and has undertaken several initiatives to manage the risk of consumer buying
habits while simultaneously lessening our dependence upon climate-sensitive commodities. For example, to adapt to and mitigate
the temperature and precipitation impact, PepsiCo has implemented our Sustainable Farming Program (SFP) (formerly our
Sustainable Farming Initiative, or SFI) which enables our company-owned and contract growers to compete in a resource
constrained future. We have invested in programs to improve water efficiency in water stressed regions, enhance soil health and
improve farm yields and resiliency at the same time.

Cost of management
7800000

Comment
PepsiCo investments in improving crop yields are proprietary. PepsiCo has a corporate Sustainable Agriculture team in place
comprising a Vice President, Director and Manager. The team is supported by agriculture experts in our business divisions in
implementing sustainable agriculture practices at our key crop suppliers.

Identifier
Risk 4

Where in the value chain does the risk driver occur?
Direct operations

Risk type
Transition risk

Primary climate-related risk driver
Reputation: Increased stakeholder concern or negative stakeholder feedback

Type of financial impact driver
Reputation: Reduced revenue from decreased demand for goods/services

Company-specific description
Any negative perception (whether valid or not) of PepsiCo’s response to climate change or water scarcity could result in adverse
publicity and could adversely affect PepsiCo’s business, financial condition or results of operations. For example, our company has
faced accusations related to our palm oil supply chain and our efforts to address both environmental and social sustainability within
the space.

Time horizon
Medium-term

Likelihood
More likely than not

Magnitude of impact
High

Potential financial impact
160000000

Explanation of financial impact
PepsiCo’s reputation and the behavior of consumers in choosing our products are important to the market value and revenue
generation of the Company. Changes in consumer preference, for example, due to a negative reaction to PepsiCo’s reputation
relative to the environment could adversely affect PepsiCo’s business, for example, a one percent impact on PEP’s market value
(defined as our market capitalization) would equate to ~$1.6 billion.

Management method
To make consumers aware that PepsiCo’s goal is to operate in a sustainable manner, we undertook several initiatives to manage
the risk of consumer buying habits while simultaneously reducing our dependence upon climate-sensitive commodities. For
example, in 2016, we publicly expressed our support for the Paris climate agreement and published an aggressive, science based
goal, to reduce absolute GHG emissions by 20% by 2030 across our entire value chain. In packaging, our Packaging Advance
Research (PAR) team created a Life Cycle Analysis (LCA) tool utilizing ISO 14040/44 and PAS 2050 standards. PepsiCo uses the
findings and tool capabilities to: incorporate life cycle thinking in our day-to-day Research & Development (R&D) data-based
decision making; develop our strategy around sustainable beverage packaging; and identify pathways that help lower our carbon
footprint. PepsiCo has a supplier outreach program to help drive energy conservation with strategic suppliers and franchise

CDP
operations in the U.S., Mexico, Latin America, South America and Western Europe. Additionally, we are a member of the CDP Supply Chain.

**Cost of management**
1000000

**Comment**
PepsiCo's Global PPGA team manages regulatory issues with governments and stakeholders around the world. A significant amount of time, equivalent to five full-time employees (FTEs), is spent on climate change-related issues. Over 1,000 people are also involved in developing, assessing and delivering all the aspects of our company wide cross functional climate change strategy. The direct costs associated with the program are approximately $1 million per year according to 2015 data.

</table>

**Where in the value chain does the opportunity occur?**
Direct operations

**Opportunity type**
Resilience

**Primary climate-related opportunity driver**
Participation in renewable energy programs and adoption of energy-efficiency measures

**Type of financial impact driver**
Increased reliability of supply chain and ability to operate under various conditions

**Company-specific description**
Voluntary agreements on climate change mitigation, such as the Paris Climate Agreement and We Mean Business, represent an opportunity for PepsiCo to make our operations and supply chains more energy efficient through efforts to reduce emissions. Under PepsiCo's Performance with Purpose (PwP) strategy we are already implementing programs to reduce greenhouse gas (GHG) emissions. Through our GHG mitigation programs, such as our Resource Conservation (ReCon) program within our own facilities and our supplier outreach programs we are more likely than not to be able to rapidly meet the requirements of voluntary programs and our own goals.

**Time horizon**
Short-term

**Likelihood**
More likely than not

**Magnitude of impact**
Medium-low

**Potential financial impact**
1600000000

**Explanation of financial impact**
Financial benefits of positioning our business to rapidly implement voluntary agreements, such as the Paris Climate Agreement, include savings from energy efficiency projects and reputational benefits that translate into increased sales, and potential for increased investor goodwill. For example, a one percent impact on PEP’s market value (defined as our market capitalization) would equate to approximately $1.6 billion.
PepsiCo has positioned itself advantageously versus competitors by actively promoting our PwP program to communicate its proactive approach to sustainability issues. Our second generation PwP goals were announced in 2016 and include industry-leading goals to reduce GHG emissions across our value chain. We believe that delivering these goals will lead to enhanced reputation, more sustainable growth and financial performance that outperform our competitors. For example, since 2007 we have upgraded our coolers and vending machines to be 60% more energy efficient, saving our customers approximately $18 million on average annual energy costs.

**Cost to realize opportunity**

1000000

**Comment**

PepsiCo's Global Public Policy and Government Affairs teams manage regulatory issues with governments and stakeholders around the world. A significant amount of time, equivalent to five full-time employees (FTE)s, is spent on climate change related issues. Over 1,000 people are also involved in developing, assessing and delivering the program at the corporate level and our 300 sites. The direct costs associated with the program are approximately $1 million per year according to 2015 data.

**Where in the value chain does the opportunity occur?**

Supply Chain

**Opportunity type**

Products and services

**Primary climate-related opportunity driver**

Development of new products or services through R&D and innovation

**Type of financial impact driver**

Increased revenue through new solutions to adaptation needs (e.g., insurance risk transfer products and services)

**Company-specific description**

Climate change in terms of temperature extremes, change in mean precipitation, precipitation patterns, droughts and floods and changes in natural resources all impact agriculture and present opportunities for PepsiCo as a food and beverage company that relies on agriculture. The unique knowledge PepsiCo has of potatoes, oranges, sugar and oats could be a strategic opportunity for PepsiCo in locations such as the UK and the U.S., as we develop new strains of our core commodities, allowing us to realize a positive impact from our sustainable agriculture activities.

**Time horizon**

Medium-term

**Likelihood**

More likely than not

**Magnitude of impact**

Medium-high

**Potential financial impact**

1000000000

**Explanation of financial impact**

The total potential exposure to our ingredients/agriculture due to changes in climate could be hypothetically in excess of $1 billion per year which is 10% of an annual spend of $10 billion according to 2015 procurement data. PepsiCo's ability to sustain and restore its supply chain in the likelihood of disruptive events could enable the Company to hedge cost increases lower than anticipated and reduce disruptions in product availability. This could potentially result in a competitive advantage.

**Strategy to realize opportunity**

Our management method to realize this opportunity is to continue implementation and scale-up of our Sustainable Farming Program (SFP) (formerly our Sustainable Farming Initiative, or SFI). Through SFP, we have invested in programs to improve water efficiency and soil health while improving crop yields and overall farm resilience. For example, with farmers in the UK from 2010 to 2015, we reduced the amount of carbon dioxide equivalent (CO2e) that arises from growing our core crops by 50% in high water risk sourcing areas. The aim of this work is to expand key learnings and initiatives into our European agricultural supply chain. In 2017, this included incorporating the Cool Farm Tool, an on-farm carbon calculator, into grower management practices, and drip irrigation, which aims to increase yields while using significantly less water than traditional irrigation techniques.
PepsiCo investments in improved crop yield are proprietary. PepsiCo has a corporate Sustainable Agriculture team in place comprising a Vice President, Director and Manager who are supported by agriculture experts in our business divisions in implementing sustainable agriculture practices at our key crop suppliers.

Identifier
Opp3

Where in the value chain does the opportunity occur?
Direct operations

Opportunity type
Products and services

Primary climate-related opportunity driver
Shift in consumer preferences

Type of financial impact driver
Better competitive position to reflect shifting consumer preferences, resulting in increased revenues

Company-specific description
PepsiCo’s response to climate change could be an opportunity for increased sales and demand for product if consumers respond favorably to our climate change initiatives. Through our annual materiality assessment we identify, prioritize and validate topics that are material to our stakeholders and consumers. Energy and climate is a topic that was deemed material in 2017 and, therefore, is an area we will continue to monitor and manage in order to maintain a favorable position with our stakeholders.

Time horizon
Medium-term

Likelihood
More likely than not

Magnitude of impact
Medium-high

Potential financial impact
1600000000

Explanation of financial impact
PepsiCo’s reputation and the behavior of consumers in choosing our products are important to the market cap and revenue generation of the Company. The 2017 net revenues for PepsiCo were more than $63 billion. PepsiCo revenues are sensitive to changes in consumer preferences. For example, a one percent impact on PEP’s market value (defined as our market capitalization) would equate to ~$1.6 billion. Changes in consumer preferences, for example, due to a positive reaction to PepsiCo’s reputation, and the reputation of its products relative to the environment, could positively affect PepsiCo’s business, financial condition or results of operations although it would be difficult to precisely identify the driving factors causing a change in consumer behavior.

Strategy to realize opportunity
PepsiCo has positioned itself advantageously versus competitors by adopting and implementing our PwP program. Our second generation PwP goals were announced in 2016 and include industry-leading goals to reduce GHG emissions across our value chain. We continue to report against this goal annually in our Sustainability Report. In 2017, through various activities within our operations and our supply chain, we have reduced GHG emissions more than 2 million metric tons. For example, our Frito-Lay North America Compressed Natural Gas (CNG) fleet drove 63 million miles in 2017, and has driven over 211 million miles life-to-date. Today, 42 percent of our Over-the-Road fleet in Frito-Lay North America has been converted to CNG. We believe that continuing to deliver on these goals will lead to enhanced reputation, more sustainable growth and financial performance that will outperform our competitors.

Cost to realize opportunity
1000000

Comment
PepsiCo has a corporate Sustainable Agriculture team in place comprising a Vice President, Director and Senior Manager which is supported by agriculture experts in our business divisions in implementing sustainable agriculture practices at our key crop suppliers. Over 1,000 people are also involved in developing, assessing and delivering all the aspects of our company-wide cross-functional climate change strategy. The direct costs associated with the program are approximately $1 million per year according to 2015 data.

C2.6
(C3.1) Are climate-related issues integrated into your business strategy?  
Yes

(C3.1a) Does your organization use climate-related scenario analysis to inform your business strategy?  
No, but we anticipate doing so in the next two years
Indicate whether your organization has developed a low-carbon transition plan to support the long-term business strategy. Yes

(C3.1c) Explain how climate-related issues are integrated into your business objectives and strategy.

(i) PepsiCo has identified climate change as a business risk through our Integrated Risk Management Framework, a process that identifies, assesses, prioritizes, manages, and monitors the risks affecting the Company across its operations. The identification of climate change as a key risk has influenced our business strategy in the following ways: 1) We have integrated a greenhouse gas (GHG) reduction target into our Performance with Purpose (PwP) strategy, PepsiCo's vision to deliver top-tier financial performance over the long term by integrating sustainability into our business. 2) Climate strategy and actions are reviewed and managed in the context of our short and long-term business strategy. 3) Climate change risks are included in our Annual Report on Form 10-K. Several aspects of climate change have influenced our strategy, including: a) the need for our business to adapt to a changing environment driven by rising temperatures and fluctuating weather patterns that may affect our supply chain; and b) the opportunity to develop a product portfolio that includes fewer GHG-intensive and water-intensive products. Our long-term strategy has been influenced by climate change through our merger and acquisition strategy. We have embedded mechanisms to quantify the impact of growth and M&A activity on our ability to deliver our Climate goal into our investment allocation processes, as well as integrating a requirement for business units to conduct a water-related risk assessment prior to any major acquisition.

(ii) We have integrated a GHG reduction target into our PwP strategy – announced in 2016, our new environmental goals reach well beyond our direct manufacturing operations, enabling us to focus on working to reduce environmental impacts across our value chain — beginning with a product's sourcing and extending through its use. Our climate goal is to reduce GHG emissions by 20% by 2030 across our value chain in absolute terms compared to our 2015 baseline. We established this goal because we recognize that as the world's population grows and the demand for water and energy increases, continuing a business as usual approach will drive increased GHG emissions, which is predicted to further accelerate climate change and potentially put crops and other raw materials that PepsiCo needs at increased risk. We believe that our climate change strategy is industry-leading and will support our efforts to build PepsiCo's reputation as a leader in environmental sustainability, potentially translating into competitive advantage with our customers and consumers.

(iii) We continued to make progress towards our goal in 2017 by continuing to integrate our emissions reduction objectives under the goal into our business strategies in our focus areas of agriculture, packaging, manufacturing and transportation and distribution. For all of these areas, in 2017, we have begun incorporating the cost of implementation within our annual, as well as five-year business plans. We are investing in a variety of actions across our operations, including energy efficiency improvements driven by our Resource Conservation (ReCon) program, a comprehensive, global platform of resources, tools and programs designed to improve energy, water and waste efficiencies in our manufacturing processes. Our Frito-Lay North America Compressed Natural Gas (CNG) fleet drove 63 million miles in 2017, and has driven over 211 million miles life-to-date. Today, 42 percent of our Over-the-Road fleet in Frito-Lay North America has been converted to CNG. Continued implementation of our higher efficiency coolers and vending machines, involving the replacement of retired units with more efficient point-of-sale equipment, reduced the GHG emissions from these sources by over 700,000 metric tons during this reporting year when compared to estimated emissions by the now-retired machines during the prior year. Our Sustainable Farming Program (SFP) (formerly our Sustainable Farming Initiative, or SFI), which we believe reflects industry best practice, is designed to help position us and our farmers to compete more effectively in a resource-constrained future. Through the program, we are working with our farmers to reduce climate change impacts of farming practices, improve soil health, and improve water use efficiency.
Disclose details of your organization’s low-carbon transition plan.

At the heart of PepsiCo is Performance with Purpose (PwP) – our goal to deliver top-tier financial performance while creating sustainable growth and shareholder value. In practice, PwP means providing a wide range of foods and beverages from treats to nutritious eats; trying to find innovative ways to reduce our impact on the environment and lower our operating costs; working to provide a safe and inclusive workplace for our employees globally; and respecting, supporting and investing in the local communities where we operate. As part of our PwP agenda, we are working towards a goal of reducing our emissions across our value chain by 20% by 2030 against a 2015 baseline. Through the efforts that are required to deliver on our goal, we are not only thinking of progress against our goals, but also taking the opportunity to embed a culture of evaluating our business practices and strategies through a greenhouse gas (GHG) lens. Through our first generation PwP goals and continuing with our current agenda, our teams within direct manufacturing, as well as non-manufacturing operations are continuously working towards lowering our carbon emissions through energy efficiency and renewable energy measures. We are also working within our supply chain through various measures in the areas of agriculture, packaging, transportation and distribution and supplier operations to lower carbon emissions and use alternative materials with lower carbon impact. For example, we are exploring alternative packaging materials for our rigid as well as flexible packaging film that will be sourced from renewable materials.

In addition to this, we are working to incorporate sustainability and carbon impact as a metric during our new product development process. This initiative will help our internal teams within the R&D, Marketing and Commercialization functions to choose product ingredients, packaging materials, etc. that have a lower carbon impact than existing choices. Over time, this will help not only continuously improve our portfolio but transform our business towards being low carbon impact.

C3.1g

(C3.1g) Why does your organization not use climate-related scenario analysis to inform your business strategy?

Climate-related scenario analysis is not currently used to inform our business strategy since we have developed and set a Science Based Target (SBT) to manage our emissions and transition our business from a business-as-usual scenario to one where our business growth and emissions do not follow the same trajectory. As part of the process for setting an SBT target, we conducted a complete assessment of our emissions for all three scopes. We then performed scenario analysis to determine the future projection of our emission. This helped inform our strategy for our absolute emission reduction target, as well as our priority areas of work to reduce emissions. Under our Performance with Purpose (PwP) agenda for climate, we continue to conduct projections of our emissions and emission reductions to inform our performance towards our goal, as well as to build our strategies in the various areas of our business.

In the future, we may look to incorporate climate-related scenario analysis to further inform our business strategy and goal. Scenario analysis could not only help us determine possible futures but also help us identify additional pathways and technologies for emission reduction.

PepsiCo sources dozens of agricultural ingredients from farmers around the world for our products, both directly and indirectly. Our Sustainable Farming Program (SFP) (formerly our Sustainable Farming Initiative, or SFI) is a program we use to engage with growers on farms, of all sizes and types, around the world in order to encourage continual improvement in sustainable farming practices, expand respect for workers’ human rights, enhance growers’ capabilities, and address risks. Through the SFP, we strive to sustainably source virtually all of our direct agricultural raw materials that we purchase from PepsiCo long-term growers by 2020. In addition to our core agricultural raw materials that we directly source, there are a number of other raw materials that we procure through shared supply chains, such as palm oil, cane sugar, wheat and cornmeal. We intend to sustainably source our major indirect agricultural raw materials by 2025, and cane sugar and palm oil by 2020.

Underway

Please explain
As part of our PwP 2025 agenda, we have set the following goals related to packaging: • Strive to design 100% of our packaging to be recyclable, compostable or biodegradable • Increase recycled materials in our plastic packaging • Reduce packaging’s carbon impact • In partnership with the PepsiCo Foundation, work to increase recycling rates

Part of emissions target
ABS2

Is this target part of an overarching initiative?
Other, please specify (Sustainable Packaging)
C4.3

(C4.3) Did you have emissions reduction initiatives that were active within the reporting year? Note that this can include those in the planning and/or implementation phases.

Yes

C4.3a

(C4.3a) Identify the total number of projects at each stage of development, and for those in the implementation stages, the estimated CO2e savings.

<table>

(C-AC4.4/C-FB4.4/C-PF4.4)

(C-AC4.4/C-FB4.4/C-PF4.4) Do you implement management practices on your own land with a climate change mitigation and/or adaption benefit?

Yes

C-AC4.4a/C-FB4.4a/C-PF4.4a
Specify the agricultural or forest management practice(s) implemented on your own land with climate change mitigation and/or adaptation benefits and provide a corresponding emissions figure, if known.

**Management practice reference number**
MP1

**Management practice**
Crop rotation

**Description of management practice**
Through our Sustainable Farming Program (SFP) (formerly our Sustainable Farming Initiative, or SFI), growers are encouraged to implement crop rotation practices to improve soil fertility, as well as manage pests.

**Primary climate change-related benefit**
Emission reductions (mitigation)

**Estimated CO2e savings (metric tons CO2e)**
1900000

**Please explain**
Estimated emissions savings from implementing this management practice is represented in aggregate of all on-farm management practices planned that are able to deliver reductions by our goal year of 2030. Also supports: ● Increasing resilience to climate change (adaptation) ● Increase carbon sink (mitigation) ● Reduced demand for fossil fuel (adaptation) ● Reduced demand for fertilizers (adaptation) ● Reduced demand for pesticides (adaptation)

**Management practice reference number**
MP2

**Management practice**
Fertilizer management

**Description of management practice**
Through our SFP, growers are encouraged to manage fertilizers by incorporating into the soil using split application to minimize Nitrous Oxide emissions. Growers are encouraged to use tools to determine the amount of fertilizer to apply, as well as to use organic fertilizer and low carbon fertilizers.

**Primary climate change-related benefit**
Emission reductions (mitigation)

**Estimated CO2e savings (metric tons CO2e)**
1900000

**Please explain**
Estimated emissions savings from implementing this management practice is represented in aggregate of all on-farm management practices planned that are able to deliver reductions by our goal year of 2030. Also supports: ● Increasing resilience to climate change (adaptation) ● Increase carbon sink (mitigation) ● Reduced demand for fossil fuel (adaptation) ● Reduced demand for fertilizers (adaptation) ● Reduced demand for pesticides (adaptation)

(C4.5) Do you classify any of your existing goods and/or services as low-carbon products or do they enable a third party to avoid GHG emissions?
Yes

(C4.5a)
(C4.5a) Provide details of your products and/or services that you classify as low-carbon products or that enable a third party to avoid GHG emissions.

Level of aggregation
Company-wide

Description of product/Group of products
PepsiCo provides refrigeration equipment, including coolers and vending machines, at the point of sale to our retail customers around the world. Although PepsiCo retains ownership of the equipment, the electricity use is the responsibility of the retailer. Implementation of our Higher Efficiency Coolers and Vending Machine Program is positively impacting Scope 3 emissions through the replacement of retired units with more efficient point of sale equipment. During this reporting year, we estimate that replacement of existing units at customer locations with more energy efficient units resulted in an energy savings of over 1.5 billion kwh and a GHG reduction of 18% across our entire portfolio of units from the baseline year of 2015.

Are these low-carbon product(s) or do they enable avoided emissions?
Avoided emissions

Taxonomy, project or methodology used to classify product(s) as low-carbon or to calculate avoided emissions
Other, please specify (Climate Registry and US EPA)

% revenue from low carbon product(s) in the reporting year
1

Comment
Calculation of emissions using Climate Registry or U.S. EPA emissions factors for the electricity grids available in country of deployment applied against average estimated usage for each type and compared to models available in previous years. The % revenue figure is total revenue from the vending category of our foodservice business.

C5. Emissions methodology

C5.1

C6. Emissions data

C6.1

(C6.1) What were your organization's gross global Scope 1 emissions in metric tons CO2e?

Row 1

Gross global Scope 1 emissions (metric tons CO2e)
3734520

Comment

C6.2

(C6.2) Describe your organization's approach to reporting Scope 2 emissions.

Row 1

Scope 2, location-based
We are reporting a Scope 2, location-based figure

Scope 2, market-based
We are reporting a Scope 2, market-based figure

Comment
We are reporting against both methodologies; however we are measuring progress against our goals using the market based methodology. We do not currently have access to electricity supplier emissions factors or residual emissions factors for all markets, however, where they have been available (for example, in Europe) we have applied them to our market-based Scope 2 reporting figure. We have also calculated our Scope 2 emissions based on location-based methodology so that we are able to judge the impact of our reduction efforts against both methodologies.

C6.3
(C6.3) What were your organization's gross global Scope 2 emissions in metric tons CO2e?

Row 1

Scope 2, location-based
1746370

Scope 2, market-based (if applicable)
1713950

End-year of reporting period
<Not Applicable>

Comment

C6.4

(C6.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure?

Yes

C6.4a
(C6.4a) Provide details of the sources of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure.

**Source**
Operational Control Farms and Dairies

**Relevance of Scope 1 emissions from this source**
Emissions are not relevant

**Relevance of location-based Scope 2 emissions from this source**
Emissions are not relevant

**Relevance of market-based Scope 2 emissions from this source (if applicable)**
Emissions are not relevant

**Explain why the source is excluded**
Our company's farms in China and Egypt have not been evaluated as it is estimated that their contribution to our emissions inventory is less than 1%. While we deem these not relevant in our overall emissions inventory, we do include these farms in our Sustainable Farming Program (SFP) (formerly our Sustainable Farming Initiative, or SFI), and are working to implement practices that improve overall farm health, as well as reduce greenhouse gas (GHG) emissions.

---

**Source**
International Offices/Warehouses (partial)

**Relevance of Scope 1 emissions from this source**
Emissions are not relevant

**Relevance of location-based Scope 2 emissions from this source**
Emissions are not relevant

**Relevance of market-based Scope 2 emissions from this source (if applicable)**
Emissions are not relevant

**Explain why the source is excluded**
A number of our small offices and distribution centers around the world have not been evaluated as it is estimated that their contribution to our emissions inventory is estimated to be less than 1%.

---

**Source**
De Minimis sources

**Relevance of Scope 1 emissions from this source**
Emissions are not relevant

**Relevance of location-based Scope 2 emissions from this source**
Emissions are not relevant

**Relevance of market-based Scope 2 emissions from this source (if applicable)**
Emissions are not relevant

**Explain why the source is excluded**
The sum of excluded emissions from all sources is less than 5% of our inventory. PepsiCo strives to report 100% of significant operations within its operational boundary. A de Minimis reporting threshold of 1% is applied to all activities. Estimated completeness of the 2017 inventory is >95% as a percentage of total emissions.

---

(C6.5) Account for your organization's Scope 3 emissions, disclosing and explaining any exclusions.
Purchased goods and services

Evaluation status
Relevant, calculated

Metric tonnes CO2e
39026490

Emissions calculation methodology
Product-related purchased goods and services emissions. PepsiCo has conducted over 60 lifecycle analysis (LCA) or product carbon footprints covering a representative sample of its overall product portfolio, which formed the basis for calculating emissions in this category. These studies broke down the emissions of products by lifecycle phases, which included raw materials, packaging, incoming transport, manufacturing, retail and distribution, complementary products, use phase, end of life of packaging. Sales data was collected globally across all regions of PepsiCo's operations across all product categories and total volumes (liters for liquids, kg for solids) for all products were determined. All products were then matched to existing LCA-studied products where an exact match was available. Where an exact match was not possible, the closest proxy was used based on key attributes – product type, sugar type (if applicable), packaging type and packaging size. In this way, the total lifecycle carbon footprint of all products sold by PepsiCo in 2015 was calculated. Being total lifecycle, this covered the entire value chain, including activities both upstream and downstream of PepsiCo. Specifically for this category “purchased goods and services”, this was determined to be the raw materials and packaging portion of the overall lifecycle product carbon footprint of all PepsiCo products. For non-product purchased goods and services, procurement data was collected on all non-product spend across the business, which included categories such as: services, IT, media, and facilities. The total spend on non-products was multiplied by environmentally extended input output (EEIO) emission factors to estimate emissions. Total emissions in this category are the sum of product and non-product related purchased goods and services emissions.

Percentage of emissions calculated using data obtained from suppliers or value chain partners
50

Explanation
This reflects the contribution of product related emissions to overall purchased goods and services emissions. Product-related emissions were calculated by reference to lifecycle product carbon footprint studies, which obtained data directly from suppliers. Non-product related purchased goods and services emissions, were estimated based on procurement spend, rather than directly procuring data from suppliers and others in our value chain. All Scope 3 estimates are based on 2015 sales volumes and will be updated every 5 years going forward.

Capital goods

Evaluation status
Relevant, calculated

Metric tonnes CO2e
1698930

Emissions calculation methodology
For capital goods, procurement data was collected on all capital spending in 2015 and the total spend was multiplied by EEIO emission factors to estimate emissions.

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Explanation
Emissions in this category were estimated based on procurement spend, rather than directly procuring data from suppliers and others in our value chain. All Scope 3 estimates are based on 2015 sales volumes and will be updated every 5 years going forward.
Fuel-and-energy-related activities (not included in Scope 1 or 2)

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**
603560

**Emissions calculation methodology**
The starting point in this category was the total emissions calculated for all PepsiCo products (see section Purchased goods and services). The next step was to isolate emissions from the manufacturing phase for all PepsiCo products. Being total lifecycle, emissions from the manufacturing phase includes Scope 1, Scope 2 and fuel and energy-related activities not included in Scope 1 or 2 (e.g., extraction and transportation of fuels, transmission and distribution losses of electricity, etc.). A portion of the total manufacturing emissions of all PepsiCo products was apportioned to the category “fuel and energy-related activities” by reference to the UK’s Department of Environment, Food and Rural Affairs’ (DEFRA’s) guidelines on the Scope 3 emissions of fuels and electricity.

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
100

**Explanation**
Emissions in this category were calculated by reference to lifecycle product carbon footprint studies, which obtained data directly from suppliers. All Scope 3 estimates are based on 2015 sales volumes and will be updated every 5 years going forward.

**Upstream transportation and distribution**

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**
1161810

**Emissions calculation methodology**
The starting point in this category was the total emissions calculated for all PepsiCo products (see section Purchased goods and services). For “upstream transportation and distribution,” this was determined to be the incoming transportation portion of the overall lifecycle product carbon footprint of all PepsiCo products. This includes emissions from transporting raw and packaging materials to PepsiCo manufacturing facilities.

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
50

**Explanation**
Emissions in this category were calculated by reference to lifecycle product carbon footprint studies, which obtained data directly from suppliers. All Scope 3 estimates are based on 2015 sales volumes and will be updated every 5 years going forward.

**Waste generated in operations**

**Evaluation status**
Not relevant, calculated

**Metric tonnes CO2e**
60360

**Emissions calculation methodology**
The starting point in this category was the total emissions calculated for all PepsiCo products (see section Purchased goods and services). The next step was to isolate emissions from the manufacturing phase for all PepsiCo products. The manufacturing phase includes emissions from waste generated during manufacturing of products. A portion of the total manufacturing emissions of all PepsiCo products was apportioned to the category “waste generated in operations.” This includes emissions from the treatment of waste in PepsiCo’s manufacturing facilities.

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
50

**Explanation**
Reporting data on waste generated in operations does not require collecting data from suppliers or others in our value chain.
Business travel

Evaluation status
Not relevant, calculated

Metric tonnes CO2e
121070

Emissions calculation methodology
Calculated based on estimating the percentage of PepsiCo's overall workforce that travels for business. The overall number of employees that engage in business travel was multiplied by an average emission factor for business travel per employee per year. The emission factor is calculated by reference to governmental data (U.S. EPA, UK Department of Transport) on the average breakdown of business travel by main transportation modes (e.g., car, airplanes, train), frequency of travel and average distance of travel.

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Explanation
No data was collected from suppliers or others in our value chain. Given the immateriality of emissions in this category, it was determined that effort be concentrated on other more impactful areas of PepsiCo’s footprint. All Scope 3 estimates are based on 2015 sales volumes and will be updated every 5 years going forward.

Employee commuting

Evaluation status
Not relevant, calculated

Metric tonnes CO2e
506710

Emissions calculation methodology
Calculated using 2015 Full-Time Employee (FTE) total. Employee emissions calculated for each commuting travel type – FTE by country * average distance covered by specified mode of transport * average emission per employee per year. Developed a model that takes into account the emissions related to the major modes of transport in UK, Australia and the U.S. Data for the U.S. has been used as an estimate for the rest of the world. Sources: government papers and U.S. Department of Transportation.

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Explanation
See above

Upstream leased assets

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
0

Emissions calculation methodology

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Explanation
Emissions were not calculated based on an analysis that emissions associated with upstream leased assets did not contribute greater than 1% of overall Scope 3 emissions.
Downstream transportation and distribution

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**
9964010

**Emissions calculation methodology**
The starting point in this category was the total emissions calculated for all PepsiCo products (see section Purchased goods and services). For “downstream transportation and distribution,” this was determined to be the retail and distribution portion of the overall lifecycle product carbon footprint of all PepsiCo products. This includes emissions from transporting (with chilling, if applicable) PepsiCo products to retail distribution centers (RDCs), energy and chilling at RDCs, transportation (with chilling if applicable) to retail outlets, and energy and chilling at retail outlets. Total emissions from PepsiCo-owned vendors and coolers was calculated by taking the total number, type and efficiency of units in operation multiplied by the electric grid emission factor for the country of operation. This was done separately from the overall footprint but is considered included in the overall number for this category. It accounts for 40% of the total for this category.

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
50

**Explanation**
Emissions in this category were calculated by reference to lifecycle product carbon footprint studies, which obtained data directly from suppliers. All Scope 3 estimates are based on 2015 sales volumes and will be updated every 5 years going forward.

Processing of sold products

**Evaluation status**
Not relevant, explanation provided

**Metric tonnes CO2e**
0

**Emissions calculation methodology**

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
0

**Explanation**
By the definition in the WRI/WBSCD The Greenhouse Gas Protocol – Scope 3 Protocol, this item is not applicable to PepsiCo as we do not generate products that are processed downstream of our manufacturing.

Use of sold products

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**
3046900

**Emissions calculation methodology**
The starting point in this category was the total emissions calculated for all PepsiCo products (see section Purchased goods and services). For “use of sold products,” this was determined to be the use phase portions of the overall lifecycle product carbon footprint of all PepsiCo products. The use phase of emission of products included emissions from the refrigeration of beverages at home prior to consumption.

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
50

**Explanation**
Best available information used, such as cooking times on packs, previous survey data on length of time drinks are refrigerated, All Scope 3 estimates are based on 2015 sales volumes and will be updated every 5 years going forward.
End of life treatment of sold products

Evaluation status
Relevant, calculated

Metric tonnes CO2e
1195840

Emissions calculation methodology
The starting point in this category was the total emissions calculated for all PepsiCo products (see section Purchased goods and services). For “end of life treatment of sold products,” this was determined to be the packaging end of life portion of the overall lifecycle product carbon footprint of all PepsiCo products. This includes emissions from the waste treatment of the packaging materials used in PepsiCo products, and considers the impact of various methods of treatment (recycling, landfill, incineration with or without energy recovery).

Percentage of emissions calculated using data obtained from suppliers or value chain partners
50

Explanation
Calculated using average emissions of waste treatment, not from any specific waste treatment service providers. All Scope 3 estimates are based on 2015 sales volumes and will be updated every 5 years going forward.

Downstream leased assets

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
0

Emissions calculation methodology

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Explanation
Emissions from downstream leased assets were not calculated based on an analysis that emissions associated with downstream leased assets did not contribute greater than 1% of overall Scope 3 emissions.

Franchises

Evaluation status
Relevant, calculated

Metric tonnes CO2e
1418720

Emissions calculation methodology
The starting point in this category was the total emissions calculated for all PepsiCo products (see section Purchased goods and services). For “franchises,” this was determined to be the third party manufacturing portion of the overall manufacturing lifecycle product carbon footprint of all PepsiCo products. This was calculated by subtracting PepsiCo’s total Scope 1 & 2 emissions from the overall manufacturing footprint.

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Explanation
The overall emissions of all products sold by PepsiCo in 2015 was calculated (see purchased goods and services section), regardless of whether production was in house or franchised. Therefore, for 2015, the emissions of franchises are included but contained in the overall emissions of all scope 3 categories. For the manufacturing portion, emissions were calculated as described in the purchased goods and services section. The average carbon intensity of products produced by a franchise is not likely to vary significantly compared to the same products produced by a PepsiCo-owned factory. All Scope 3 estimates are based on 2015 sales volumes and will be updated every 5 years going forward.
Investments

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**
2730730

**Emissions calculation methodology**
For investments, procurement data was collected on investment related spending in 2014, and the total spend was multiplied by EEIO emission factors to estimate emissions.

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
0

**Explanation**
Emissions in this category were estimated based on procurement spend, rather than directly procuring data from suppliers and others in our value chain. All Scope 3 estimates are based on 2015 sales volumes and will be updated every 5 years going forward.

Other (upstream)

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**

**Emissions calculation methodology**

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**

**Explanation**

Other (downstream)

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**
1282850

**Emissions calculation methodology**
Total emissions from complementary products were calculated to account for emissions of products that are used with our products. This is primarily from milk used with our oat products.

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
50

**Explanation**
Best available information used, such as serving size. All Scope 3 estimates are based on 2015 sales volumes and will be updated every 5 years going forward.

<td>PepsiCo has conducted over 60 lifecycle product carbon footprints (LCA) covering a representative sample of its overall product portfolio, which formed the basis for calculating emissions in this category. These studies broke down the emissions of products by lifecycle phases, which included: raw materials, packaging, incoming transport, manufacturing, retail and distribution, complementary products, use phase, end of life of packaging. Sales data was collected globally across all regions of PepsiCo's operations across all product categories and total volumes (liters for liquids, kg for solids) for all products were determined. All products were then matched to existing LCA studied products where an exact match was available. Where an exact match was not possible, the closest proxy was used based on key attributes – product type, sugar type (if applicable), packaging type and packaging size. In this way, the total lifecycle carbon footprint of all products sold by PepsiCo in 2015 was calculated. Being total lifecycle, this covered the entire value chain, including activities both upstream and downstream of PepsiCo. Specifically for this category “purchased goods and services”, this was determined to be the raw materials or agricultural portion of the overall lifecycle product carbon footprint of all PepsiCo products.</td>
</tr>
<tr>
<td>Consumption</td>
<td>Use of sold products</td>
<td>3046900</td>
<td>The starting point in this category was the total emissions calculated for all PepsiCo products (see section Purchased goods and services). For “use of sold products,” this was determined to be the use phase portions of the overall lifecycle product carbon footprint of all PepsiCo products. The use phase of emission of products included emissions from the refrigeration of beverages at home prior to consumption.</td>
</tr>
<tr>
<td></td>
<td>End of life treatment of sold products</td>
<td>1195840</td>
<td>The starting point in this category was the total emissions calculated for all PepsiCo products (see section Purchased goods and services). For “end of life treatment of sold products,” this was determined to be the packaging end of life portion of the overall lifecycle product carbon footprint of all PepsiCo products. This includes emissions from the waste treatment of the packaging materials used in PepsiCo products, and considers the impact of various methods of treatment (recycling, landfill, incineration with or without energy recovery).</td>
</tr>

</table>

(C6.7) Are carbon dioxide emissions from biologically sequestered carbon relevant to your organization?
No
(C-AC6.8/C-FB6.8/C-PF6.8) Is biogenic carbon pertaining to your direct operations relevant to your current CDP climate change disclosure?
No

C-AC6.9/C-FB6.9/C-PF6.9

(C-AC6.9/C-FB6.9/C-PF6.9) Do you collect or calculate greenhouse gas emissions for each commodity reported as significant to your business in C-AC0.7/FB0.7/PF0.7?

Agricultural commodities
Palm Oil

Do you collect or calculate GHG emissions for this commodity?
Yes

Please explain
We calculate GHG emissions from this commodity for certain geographies using secondary data and literature review.

Agricultural commodities
Sugar

Do you collect or calculate GHG emissions for this commodity?
Yes

Please explain
We calculate GHG emissions from this commodity for certain geographies using secondary data and literature review.

Agricultural commodities
Wheat

Do you collect or calculate GHG emissions for this commodity?
No, not currently but intend to collect or calculate this data within the next two years

Please explain
Wheat supply chains have very low traceability and so we have not yet ascertained the source regions for the majority of our wheat. We are working towards this.

Agricultural commodities
Other (Potatoes, corn)

Do you collect or calculate GHG emissions for this commodity?
Yes

Please explain
We calculate GHG emissions from this commodity for certain geographies using industry accepted tools/methodologies such as the Cool Farm Tool. We calculate GHG emissions from this commodity for certain geographies using industry accepted tools/methodologies such as the Cool Farm Tool and the Fieldprint Calculator.

Palm Oil

Reporting emissions by
Total

Emissions (metric tons CO2e)
1310000

Denominator: unit of production
<Not Applicable>

Change from last reporting year
This is our first year of measurement

Please explain
We have calculated emissions from this commodity for volume coming from Indonesia and Malaysia only.

Sugar

Reporting emissions by
Total

Emissions (metric tons CO2e)
895220

Denominator: unit of production
<Not Applicable>

Change from last reporting year
This is our first year of measurement

Please explain
We have calculated land use emissions only from this commodity for volume coming from Brazil, Mexico, Thailand and India only.

Wheat

Reporting emissions by
Total

Emissions (metric tons CO2e)
589000

Denominator: unit of production
<Not Applicable>

Change from last reporting year
This is our first year of measurement

Please explain
We are working towards traceability within our wheat supply chains. The data reported here is an analysis conducted in 2015 from our purchased volumes.

Other

Reporting emissions by
Total

Emissions (metric tons CO2e)
6332000

Denominator: unit of production
<Not Applicable>

Change from last reporting year
This is our first year of measurement

Please explain
We are in the process of collating data collected for this commodity. The data reported here is an analysis conducted in 2015 from our purchased volumes. The emissions reported are aggregate for potatoes and corn.
C6.10

(C6.10) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.

<table>
<thead>
<tr>
<th>Intensity figure</th>
<th>0.000086</th>
</tr>
</thead>
<tbody>
<tr>
<td>Metric numerator (Gross global combined Scope 1 and 2 emissions)</td>
<td>5448470</td>
</tr>
<tr>
<td>Metric denominator</td>
<td>unit total revenue</td>
</tr>
<tr>
<td>Metric denominator: Unit total</td>
<td>63525000000</td>
</tr>
<tr>
<td>Scope 2 figure used</td>
<td>Market-based</td>
</tr>
<tr>
<td>% change from previous year</td>
<td>6</td>
</tr>
<tr>
<td>Direction of change</td>
<td>Decreased</td>
</tr>
<tr>
<td>Reason for change</td>
<td>Our emissions have declined by 1% while revenue has increased by 1.15%. This can be attributed to emission reduction activities implemented during the reporting year. We are investing in a variety of actions across our operations, including energy efficiency improvements driven by our Resource Conservation (ReCon) program, a comprehensive, global platform of resources, tools and programs designed to improve energy, water and waste efficiencies in our manufacturing processes.</td>
</tr>
</tbody>
</table>

<table>

<td>Scope 2 figure used</td>
<td>Market-based</td>
</tr>
<tr>
<td>% change from previous year</td>
<td>2</td>
</tr>
<tr>
<td>Direction of change</td>
<td>Increased</td>
</tr>
<tr>
<td>Reason for change</td>
<td>Changes in product mix resulting in different energy demand profiles. Partly mitigated by the reduction initiatives that have been implemented and started to have an impact. We have seen a 3.8% reduction in company-manufactured beverages, and a 1% increase in company-manufactured snacks. This has shifted our production slightly to the higher energy intensity snacks products, as well as a slight loss in efficiency in beverages due to the reduced volume throughout.</td>
</tr>

C-AC7.4/C-FB7.4/C-PF7.4

(C-AC7.4/C-FB7.4/C-PF7.4) Do you include emissions pertaining to your business activity(ies) in your direct operations as part of your global gross Scope 1 figure?

No

C-AC7.4c/C-FB7.4c/C-PF7.4c

(C-AC7.4c/C-FB7.4c/C-PF7.4c) Why do you not include greenhouse gas emissions pertaining your business activity(ies) in your direct operations as part of your global gross Scope 1 figure? Describe any plans to do so in the future.

<table>
<thead>
<tr>
<th>Primary reason</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Row 1</td>
<td>Judged to be unimportant; PepsiCo owns/manages some agricultural land within our direct operations. Lands are usually used to grow crops for our products. The amount of land this represents in our overall agricultural supply chain is judged to be small and, therefore, de-Minimis. Due to internal complexities in collecting this data we are not reporting emissions from company-owned agricultural land.</td>

C11.1d

(C11.1d) What is your strategy for complying with the systems in which you participate or anticipate participating?

Our first priority is to leverage our Resource Conservation (ReCon) Program to drive improvements in our energy efficiency to reduce emissions from facilities covered by Emission Trading Schemes (ETS). Examples of how we have applied this program as part of our compliance strategy include behavioral-based initiatives, as well as capital investments to reduce fuel consumption and switching to renewable fuels, such as anaerobic digesters.

In addition to our own reduction efforts, each of our ETS sites also currently receives an allocation of free allowances towards their compliance. Beyond the free allowances, we purchase allowances to meet final verified emissions, as appropriate. We do not currently source project based carbon allowances for ETS compliance. Over the longer term, we are continuing to investigate and plan to invest in further energy efficiency opportunities, as well as heat recovery and reuse and renewable fuels.

C11.2

(C11.2) Has your organization originated or purchased any project-based carbon credits within the reporting period?

No

C11.3

(C11.3) Does your organization use an internal price on carbon?

No, and we do not currently anticipate doing so in the next two years

C12. Engagement
C12.1

(C12.1) Do you engage with your value chain on climate-related issues?
Yes, our suppliers
Yes, our customers
Yes, other partners in the value chain

C12.1a

% total procurement spend (direct and indirect)
100

% Scope 3 emissions as reported in C6.5
100

**Rationale for the coverage of your engagement**
We hold our suppliers to the same standards of integrity to which we hold ourselves. An unethical or illegal act by a supplier may hurt PepsiCo’s reputation as a world-class company and cause a loss of goodwill in the communities we serve. Therefore, all suppliers are expected to follow our Supplier Code of Conduct, and relevant policies and commitments as a condition of doing business with us. Suppliers, vendors, contractors, consultants, agents and other providers of goods and services who do business with PepsiCo entities worldwide are expected to follow this Guideline, where the standards apply.

**Impact of engagement, including measures of success**
We have recently amended the environmental language / expectation in our Supplier Code (SCoC) and the changes took effect starting in 2018. As part of the amendment, suppliers are required to carry out operations with care for the environment and specifically comply with all applicable environmental laws and regulations. Suppliers are also encouraged to identify, set targets and implement action plans for reducing environmental impacts in the areas of water, wastewater, energy, greenhouse gas emissions, waste and packaging. We track the number of suppliers who take our online supplier code of conduct training. In 2017, 100% of our key suppliers took the training. Our Sustainable Sourcing Program (SSP) assesses risk and monitors supplier compliance with our SCoC through third-party auditing of our most business-critical direct suppliers and contract manufacturing and co-packing locations across 68 countries.

**Rationale for the coverage of your engagement**
We collect climate change and carbon information from our suppliers through the annual CDP Supply Chain process. Included in this process are suppliers in our key emissions categories like agriculture, packaging and third party logistics. Suppliers selected represent our top suppliers within the category that cover ~80% of procurement spend.

**Impact of engagement, including measures of success**
Our measures of success are our supplier participation rate and average supplier score. As an indicator of the impact of our engagement in 2017 our response rate was 90% well above average among CDP Supply Chain members with an average supplier score of a C. 71% of our suppliers indicated having a target for emissions reduction. We will continue collecting climate information from our suppliers through this process and use the results as a way of encouraging and incentivizing our suppliers to further act on managing and mitigating climate-related issues.

**Rationale for the coverage of your engagement**
Our Sustainable Farming Program (SFP) (formerly our Sustainable Farming Initiative, or SFI), is a program we use to engage with growers on farms of all sizes and types around the world in order to encourage continual improvement in sustainable farming practices, expand respect for workers’ human rights, enhance growers’ capabilities, and address risks. We have initiated SFP with farmers from which we source directly, given our existing relationships with those farmers and the importance of directly sourced agricultural raw materials to the continuity of our business. By 2025, our goal is to expand the SFP and other programs recognized by PepsiCo’s benchmarking protocol to our indirect crops as well. To date, we have focused on engaging growers and bringing them into the SFP through Farm Management Groups (FMGs).

**Impact of engagement, including measures of success**
To date, we have focused on engaging growers and bringing them into the SFP through Farm Management Groups (FMGs). As an indicator of the impact of our engagement, as of year-end 2017, 79% of the volume of the agricultural raw materials that we directly source has been supplied by FMGs engaged in our SFP. The percentage of FMGs engaged is one metric by which we are measuring progress. The second metric – representing our ultimate objective – is the percentage of directly sourced agricultural raw materials that we have verified as sustainably sourced.

**% Scope 3 emissions as reported in C6.5**
4

**Rationale for the coverage of your engagement**
The SFP was created as the primary vehicle for delivering against PepsiCo’s aspirations for sustainability at the farm level within our agricultural supply chain. The program is comprised of two components: • The SFP Code, which lists PepsiCo’s farm-level sustainable agriculture principles and practices, and • The SFP Continuous Improvement Process, whereby farmers are continually assessed against the SFP Code and efforts taken to address missing sustainable agriculture principles. The SFP Continuous Improvement Process is a cyclical process geared towards assessing and then addressing sustainability opportunities at the farm level within PepsiCo’s agricultural supply chain.

**Impact of engagement, including measures of success**
To date, we have focused on engaging growers and bringing them into the SFP through Farm Management Groups (FMGs). As an indicator of the impact of our engagement, as of year-end 2017, 79% of the volume of the agricultural raw materials that we directly source has been supplied by FMGs engaged in our SFP. Rationale for the coverage of your engagement
By working with key material suppliers, PepsiCo has been able to develop, test market and then commercialize new bio-based compounds for flexible packaging for several of its businesses, including Frito-Lay. PepsiCo worked with a key resin manufacturer, and a leading bio-polymer compounder, to produce the new bio-based compounds. Our supplier adapted its film extrusion lines to handle the compounded resin and produce high-quality films. Then a converter optimized its process to print and laminate the new films.

Impact of engagement, including measures of success
By working with key material suppliers, PepsiCo has been able to develop, test market and then commercialize new bio-based compounds for flexible packaging for several of its businesses, including Frito-Lay. PepsiCo worked with a key resin manufacturer, and a leading bio-polymer compounder, to produce the new bio-based compounds. Our supplier adapted its film extrusion lines to handle the compounded resin and produce high-quality films. Then a converter optimized its process to print and laminate the new films. GHG emission reduction through the implementation of this technology will be a key metric tracked for this initiative. In addition, this also contributes towards our sustainable packaging goal.

C12.1b

(C12.1b) Give details of your climate-related engagement strategy with your customers.

Type of engagement
Education/information sharing

Details of engagement
Run an engagement campaign to educate customers about the climate change impacts of (using) your products, goods, and/or services

Size of engagement

% Scope 3 emissions as reported in C6.5
18

Please explain the rationale for selecting this group of customers and scope of engagement
We introduced the PepsiCo Recycling initiative in 2010 and have continued to scale it up ever since. PepsiCo Recycling programs bring recycling solutions to colleges and universities, K-12 schools, high-traffic retail locations, professional sports facilities, events, and other organizations across the U.S. with the goal of increasing beverage container recycling rates. These customers and venues are chosen as they represent areas where high volumes of our products are consumed. We educate and inspire consumers through the belief that simple acts lead to a big impact. We believe that every bottle and can recycled helps make communities and the world a cleaner, more sustainable place.

Impact of engagement, including measures of success
Our measures of success include the number of containers collected and year over year trends in collection numbers. In 2017, the PepsiCo Recycling Program collected 72 million post-consumer containers for recycling in the U.S. an approximately 160 percent increase in container collections as compared to 2016.

Please explain the rationale for selecting this group of customers and scope of engagement
PepsiCo has strong relationships with our customers like our largest retail customer worldwide. We regularly work with this customer on programs with climate-related benefits, such as the Mid-West Row Crop Collaborative, which is a group of companies and conservation organizations working to expand agricultural solutions that protect air and water quality and enhance soil health across the entire U.S. corn and soy system in the Midwest. PepsiCo also worked with this customer to help create the Closed Loop Fund in 2014 and continues to increasingly support and invest in the fund to improve recycling both in the U.S., and internationally.

Impact of engagement, including measures of success
Measures of success for The Midwest Row Crop Collaborative are: By 2025 • 75% of row crop acres in Illinois, Iowa and Nebraska are engaged in sustainability measures • Reduce nutrient loading in these states by 20 percent • 50 percent of all irrigation units used in Nebraska will maximize water conservation By 2035 • Illinois, Iowa and Nebraska have met the 45 percent nitrogen loss reduction goal and partnerships established to expand across the Upper Mississippi River Basin. The Closed Loop Fund has continued to make progress since its launch. The fund estimates that it will eliminate more than 16 million tons of greenhouse gas emissions, divert more than 8 million cumulative tons of waste from landfills, improve recycling for more than 18 million households and save nearly $60 million for American cities.

Please explain the rationale for selecting this group of customers and scope of engagement
PepsiCo has a Partner Outreach Program to drive energy conservation with strategic franchise operations in the U.S., Mexico, Latin America, South America, Western Europe and Asia. We have made efforts to expand our Resource Conservation program to our franchise operations by providing trainings and access to tools that help measure and track performance, identify and implement improvement opportunities. This is a natural extension of our work within our owned operations to our franchise operations.

Impact of engagement, including measures of success
We track GHG emissions reduction within franchise operations as a measure of success. As a result of our engagements, we have seen ~98,000 MT of GHG emission reductions within our franchise operations through energy efficiency and renewable energy measures.

C12.1c
We value our collaborations with other stakeholders, and are actively involved in creating and fostering pre-competitive collaborations to reduce greenhouse gas emissions. Stakeholders include peer companies, as well as non-profit organizations and industry groups. These engagements help us learn about emerging sustainability topics, better inform our efforts, and help us work to create value for society. We use a variety of mechanisms to solicit feedback from our stakeholders, including bilateral meetings and participation in stakeholder networks, outreach programs, webinars and working together on a wide variety of topics, including climate. Some examples of our climate-related value chain engagements are provided here. PepsiCo is one of the founding members — along with institutions like The Nature Conservancy and individuals like Michael Bloomberg — of the Climate Leadership Council, advocating a consensus climate solution — including a gradually rising and revenue-neutral carbon tax — that bridges partisan divides, strengthens our economy, and protects our environment. To support our company’s transition to renewable energy sources, PepsiCo has also joined the Business Renewables Center at the Rocky Mountain Institute and signed on to the Renewable Energy Buyers’ Principles, developed by leading nongovernmental organizations to help increase access to more renewable energy in the United States. PepsiCo is a supporter of sustainable forestry and a member of The Consumer Goods Forum (TCGF). As a member of TCGF, we are proud signatories of the forum’s resolutions on deforestation and sustainable refrigeration released in November 2010, goals which will have a significant positive impact on climate change. Within our sustainable agriculture space, we are strong believers that collaboration can be a powerful driver of change. That is why we actively work with several organizations that foster insights and best practice sharing on agricultural practices within the global food and beverage and related industries. These include the Sustainable Agriculture Initiative (SAI) Platform, Cool Farm Alliance, and Field to Market Initiative. We are also a member and contributor to the World Food Life Cycle Database.

(C-AC12.2/C-FB12.2/C-PF12.2) Do you encourage your suppliers to undertake any agricultural or forest management practices with climate change mitigation and/or adaptation benefits?
Yes

**Management practice**
Crop rotation

**Description of management practice**
Through our Sustainable Farming Program (SFP) (formerly our Sustainable Farming Initiative, or SFI), growers are encouraged to implement crop rotation practices to improve soil fertility, as well as manage pests

**Your role in the implementation**
Financial
Knowledge sharing
Operational
Procurement

**Explanation of how you encourage implementation**
For PepsiCo, sustainable agriculture is critical to the continued growth of our business, ensuring food safety and crop resilience for continued and localized supply. As a corporation that has a global reach but operates locally in the communities where we do business, we provide relevant expertise to help advance the ways in which farming is carried out around the world. This benefits individual farmers and the communities that rely on them, while helping protect our license to operate. Our SFP is a program we use to engage with growers on farms of all sizes and types around the world in order to encourage continual improvement in sustainable farming practices, expand respect for workers' human rights, enhance growers' capabilities, and address risks. The SFP is comprised of two components: • The SFP Code, which lists PepsiCo’s farm-level sustainable agriculture principles and practices. The Code draws from principles of externally recognized agricultural codes, such as those published by the Rainforest

Management practice
Fertilizer management

Description of management practice
Through our SFP, growers are encouraged to manage fertilizers by incorporating into the soil, using split application to minimize nitrous oxide emissions. Growers are encouraged to use tools to determine the amount of fertilizer to apply as well as to use organic fertilizer and low carbon fertilizers.

Your role in the implementation

Explanation of how you encourage implementation
For PepsiCo, sustainable agriculture is critical to the continued growth of our business, ensuring food safety and crop resilience for continued and localized supply. As a corporation that has a global reach but operates locally in the communities where we do business, we provide relevant expertise to help advance the ways in which farming is carried out around the world. This benefits individual farmers and the communities that rely on them, while helping protect our license to operate. Our SFP is a program we use to engage with growers on farms of all sizes and types around the world in order to encourage continual improvement in sustainable farming practices, expand respect for workers' human rights, enhance growers' capabilities, and address risks. The SFP is comprised of two components: • The SFP Code, which lists PepsiCo's farm-level sustainable agriculture principles and practices. The Code draws from principles of externally recognized agricultural codes, such as those published by the Rainforest Alliance, GlobalG.A.P, Bonsucro, and the RSPO. • The SFP Continuous Improvement Process, through which farmers are continually assessed and efforts are taken to drive improvement in sustainable agriculture. To date, we have focused on engaging growers and bringing them into the SFP through FMGs, which are groups of farmers that show consistency across geography, crop, farm size, and a variety of other factors. PepsiCo considers an FMG engaged when: • An initial assessment against our SFP Principles and Practices has been completed; • Sustainability opportunities have been identified and improvement programs developed; and • Grower engagement in these improvement programs has been initiated. The percentage of FMGs engaged is one metric by which we are measuring progress. The second metric – representing our ultimate objective – is the percentage of directly-sourced agricultural raw materials that we have verified as sustainably sourced.
(C-AC12.2b/C-FB12.2b/C-PF12.2b) Do you collect information from your suppliers about the outcomes of any implemented agricultural/forest management practices you have encouraged?
Yes

C12.3

(C12.3) Do you engage in activities that could either directly or indirectly influence public policy on climate-related issues through any of the following?
- Direct engagement with policy makers
- Trade associations
- Funding research organizations
- Other

C12.3a

(C12.3a) On what issues have you been engaging directly with policy makers?

<table>
<thead>
<tr>
<th>Focus of legislation</th>
<th>Corporate position</th>

<tbody>
<tr>
<td>Carbon tax</td>
<td>Support</td>
<td>In 2017, we became a founding member of the U.S. Climate Leadership Council (CLC). The CLC is an international policy institute founded in collaboration with a who's who of business, opinion and environmental leaders to promote a carbon dividend framework as the most cost-effective, equitable and politically-viable climate solution. The Council is currently active in the United States and United Kingdom, and intends to expand to Germany, China and India next.</td>
<td>CLC proposes a carbon tax and dividend program to be implemented at the federal level in the United States. The program is based on four interdependent pillars: 1. A gradually rising and revenue-neutral carbon tax; 2. Carbon dividend payments to all Americans, funded by 100% of the revenue; 3. The rollback of carbon regulations that are no longer necessary; and 4. Broader carbon adjustments to level the playing field and promote American competitiveness.</td>
</tr>
<tr>
<td>Energy efficiency</td>
<td>Support</td>
<td>In 2017, we joined vehicle fleet operators, vehicle manufacturers, fuel producers, and industry groups, in expressing our strong support for the California Low Carbon fuel Standard (LCFS). The letter sent to Governor Jerry Brown and others expressed how the LCFS gives us the incentive to invest in vehicle, as well as fuel technologies today in order to bring down costs in the future. The LCFS is needed to ensure that California fulfills its statutorily-mandated greenhouse gas emission reduction targets. The LCFS promotes competition by rewarding all technologies that deliver low-carbon energy for transportation, and the policy is creating innovation for California across a range of industries.</td>
<td>The Low Carbon Fuel Standard (LCFS) is administered by the California Air Resources Board. Established in 2007 through a Governor's Executive Order, the LCFS requires producers of petroleum-based fuels to reduce the carbon intensity of their products, beginning with a quarter of a percent in 2011 culminating in a 10 percent total reduction in 2020.</td>

(C12.3c) Enter the details of those trade associations that are likely to take a position on climate change legislation.

<table>
<thead>
<tr>
<th>Trade association</th>
<th>Is your position on climate change consistent with theirs?</th>
</tr>
</thead>
<tbody>
<tr>
<td>American Beverage Association (ABA)</td>
<td></td>
</tr>
</tbody>
</table>
Consistent

Please explain the trade association's position
We understand that ABA may support various types of legislation related to climate change, such as legislation on energy efficiency, consistent with PepsiCo’s views.

How have you, or are you attempting to, influence the position?
PepsiCo is an active member of ABA. We regularly share information on our Performance with Purpose vision relating to climate change and related issues.

Trade association
Grocery Manufacturers’ Association (GMA)

Is your position on climate change consistent with theirs?
Consistent

Please explain the trade association's position
We understand that GMA may support various types of legislation related to climate change, such as legislation on energy efficiency, consistent with PepsiCo’s views.

How have you, or are you attempting to, influence the position?
PepsiCo is a member of the GMA Board. We regularly share information on our Performance with Purpose vision relating to climate change and related issues.

Trade association
Union of European Soft Drinks Associations (UNESDA)

Is your position on climate change consistent with theirs?
Consistent

Please explain the trade association's position
We understand that UNESDA welcomes the European Commission’s proposal for establishing a Circular Economy in Europe and the recently concluded review of the Waste Framework Directive (WFD) and the Packaging and Packaging Waste Directive (PPWD). UNESDA’s members are conscious of their responsibility for the end-of-life phase of packaging and advocate for a strong European framework on Extended Producer Responsibility (EPR) for packaging to increase efficiency and transparency of EPR in Europe. UNESDA supports the objective of increasing resource efficiency, sustainability and progress towards a circular economy through the recycling of materials.

How have you, or are you attempting to, influence the position?
PepsiCo is an active member of UNESDA with a seat at the Board. PepsiCo participates in UNESDA’s two main committees, as well as in the Task Force on Packaging that deals specifically with the Circular Economy Package.

Trade association
FoodDrinkEurope

Is your position on climate change consistent with theirs?
Consistent

Please explain the trade association's position
The long-term supply of safe, high-quality and affordable raw materials may be at stake as experts warn that all aspects of food security will potentially be affected by climate change, including food production and price stability. This global challenge will have far-reaching implications for the competitiveness and sustainability of all food and drink manufacturers. It is our understanding that this is why European food and drink manufacturers are actively working to try to mitigate climate change and proactively engaging with other providers along the supply chain, governments, civil society, researchers and other stakeholders.

How have you, or are you attempting to, influence the position?
PepsiCo is a member of the FoodDrinkEurope Board and participates in a variety of committees and working groups.

Trade association
European Organization for Packaging and Environment (EUROPEN)

Is your position on climate change consistent with theirs?
Consistent

Please explain the trade association's position
EUROPEN supports the objectives of the EU Circular Economy package. EUROPEN advocates for a packaging waste policy
framework that clearly defines the roles and responsibilities of all actors involved in waste management. The new Circular Economy Package should safeguard the EU internal market and be based on the principle of life cycle assessment.

How have you, or are you attempting to, influence the position?
PepsiCo is part of the EUROPEN Executive Committee and of the technical Task Force on Circular Economy that is responsible for analyzing policy developments and building an advocacy plan for the association.

---

**Trade association**
European Snacks Association (ESA)

**Is your position on climate change consistent with theirs?**
Consistent

**Please explain the trade association’s position**
We understand that ESA supports sustainable practices to protect natural resources.

**How have you, or are you attempting to, influence the position?**
PepsiCo is an ESA Board member and holds the Chairmanship of the Communication Committee.

---

C12.3d

(C12.3d) Do you publicly disclose a list of all research organizations that you fund?
No

---

C12.3e

(C12.3e) Provide details of the other engagement activities that you undertake.

Climate change is an important issue for our company, customers, consumers and our world. We believe governments and industry should move quickly and commit to ambitious, science-based action, in an effort to reduce greenhouse gas (GHG) emissions and improve our resilience to climate-related impacts.

PepsiCo has policies and programs in place to address climate change, and we engage regularly with industry, Non-Governmental Organizations (NGOs) and other stakeholders to promote actions that protect the climate. For example, in 2017 we became a founding member of the U.S. Climate Leadership Council. We have a record of supporting climate policy through membership in the U.S. Climate Action Partnership, signing the American Business Act on Climate Pledge, and supporting the Paris Climate Agreement.

Our efforts on climate action include working to (i) expand the use of sustainable farming practices, (ii) deploy HFC-free cooling equipment, (iii) reduce emissions from our truck fleet, (iv) strive for zero deforestation in our supply chain, (v) increase recycled content in our packaging, and (vi) implement energy efficiency and renewable energy investments at our facilities.

PepsiCo is a member of many trade associations and other business and civil society associations, and we do not always agree with all of the positions these associations may take on specific policy matters. As such, there may be times when PepsiCo chooses not to fund certain initiatives sponsored by such organizations. PepsiCo representatives on the boards and committees of such groups ensure that PepsiCo’s position about policy or related activities is voiced.

---

C12.3f
What processes do you have in place to ensure that all of your direct and indirect activities that influence policy are consistent with your overall climate change strategy?

PepsiCo has specific teams and individuals that are assigned responsibilities for developing corporate policy and regulatory positions, as well as engaging on regulatory policy with external stakeholders, including public policymakers, trade associations and non-government actors. The Public Policy and Government Affairs (PPGA) teams manage relationships with government actors and coordinates activities that may influence regulatory policy globally. Internally, the PPGA teams also work closely with the Office of Sustainability to ensure that our external engagements are aligned with our overall climate strategy. PPGA teams embedded within our business divisions and markets also work with their counterpart sustainability teams within those divisions, as well as the Office of Sustainability to align on activities.

(C12.4) Have you published information about your organization’s response to climate change and GHG emissions performance for this reporting year in places other than in your CDP response? If so, please attach the publication(s).

SC. Supply chain module

SC0.0
The PepsiCo company is enjoyed by consumers more than one billion times a day in more than 200 countries and territories around the world. PepsiCo generated more than $63 billion in net revenue in 2017, driven by a complementary food and beverage portfolio that includes 22 brands that generate more than $1 billion each in estimated annual retail sales (e.g. Frito-Lay, Gatorade, Pepsi-Cola, Quaker and Tropicana). At the heart of PepsiCo is Performance with Purpose (PwP) – our goal to deliver top-tier financial performance while creating sustainable growth and shareholder value. In practice, PwP means providing a wide range of foods and beverages from treats to nutritious eats; trying to find innovative ways to reduce our impact on the environment and lower our operating costs; working to provide a safe and inclusive workplace for our employees globally; and respecting, supporting and investing in the local communities where we operate.

Cautionary Statement - Statements in this submission that are “forward-looking statements” are based on currently available information, operating plans and projections about future events and trends. Terminology such as “aim,” “anticipate,” “believe,” “drive,” “estimate,” “expect,” “expressed confidence,” “forecast,” “future,” “goal,” “guidance,” “intend,” “may,” “objective,” “outlook,” “plan,” “position,” “potential,” “project,” “seek,” “should,” “strategy,” “target,” “will” or similar statements or variations of such terms are intended to identify forward-looking statements, although not all forward-looking statements contain such terms. Forward-looking statements inherently involve risks and uncertainties that could cause actual results to differ materially from those predicted in such forward-looking statements. Such risks and uncertainties include, but are not limited to: changes in demand for PepsiCo’s products; changes in, or failure to comply with, applicable laws and regulations; imposition or proposed imposition of new or increased taxes aimed at PepsiCo’s products; imposition of labeling or warning requirements on PepsiCo’s products; changes in laws related to packaging and disposal of PepsiCo’s products; PepsiCo’s ability to compete effectively; political conditions, civil unrest or other developments and risks in the markets where PepsiCo’s products are made, manufactured, distributed or sold; PepsiCo’s ability to grow its business in developing and emerging markets; uncertain economic conditions in the countries in which PepsiCo operates; the ability to protect information systems against, or effectively respond to, a cybersecurity incident or other disruption; increased costs, disruption of supply or shortages of raw materials and other supplies; business disruptions; product contamination or tampering or issues or concerns with respect to product quality, safety and integrity; damage to PepsiCo’s reputation or brand image; failure to successfully complete or integrate acquisitions and joint ventures into PepsiCo’s existing operations or to complete or manage divestitures or refranchisings; changes in estimates and underlying assumptions regarding future performance that could result in an impairment charge; increase in income tax rates, changes in income tax laws or disagreements with tax authorities; failure to realize anticipated benefits from PepsiCo’s productivity initiatives or global operating model; PepsiCo’s ability to recruit, hire or retain key employees or a highly skilled and diverse workforce; loss of any key customer or disruption to the retail landscape; any downgrade or potential downgrade of PepsiCo’s credit ratings; PepsiCo’s ability to implement shared services or utilize information technology systems and networks effectively; fluctuations or other changes in exchange rates; climate change or water scarcity, or legal, regulatory or market measures to address climate change or water scarcity; failure to successfully negotiate collective bargaining agreements, or strikes or work stoppages; infringement of intellectual property rights; potential liabilities and costs from litigation, claims, regulatory, or legal proceedings, inquiries or investigations; and other factors discussed in the risk factors section of PepsiCo’s filings with the Securities and Exchange Commission. Investors are cautioned not to place undue reliance on any such forward-looking statements, which speak only as of the date they are made. PepsiCo undertakes no obligation to update any forward-looking statements.

No
Allocate your emissions to your customers listed below according to the goods or services you have sold them in this reporting period.

**Requesting member**
Caesars Entertainment

**Scope of emissions**
Scope 1

**Emissions in metric tonnes of CO2e**
882

**Uncertainty (%)**
15

**Major sources of emissions**
These emissions include those from PepsiCo's company-owned operations that have been allocated to Caesars Entertainment. Major sources include fuel use in PepsiCo's wholly-owned or operated manufacturing facilities globally that produce products that may or may not be sold to Caesars Entertainment. Also included is fuel use in transportation vehicles that are wholly-owned or operated by PepsiCo.

**Verified**
No

**Allocation method**
Allocation based on the market value of products purchased

Please explain how you have identified the GHG source, including major limitations to this process and assumptions made

Our method for allocating emissions is to take the percentage of PepsiCo's net revenue attributable to the customer in the reporting year and apply this percentage to our global Scope 1, Scope 2 or Scope 3 emissions. Thus, our method does not distinguish between emissions from facilities that produce product sold to the customer versus emissions from all PepsiCo's production facilities world-wide.

---

**Requesting member**
Caesars Entertainment

**Scope of emissions**
Scope 2

**Emissions in metric tonnes of CO2e**
405

**Uncertainty (%)**
15

**Major sources of emissions**
These emissions include those from indirect fuel use in the generation of electricity that is consumed by PepsiCo's direct operations - our wholly-owned or operated manufacturing facilities globally that produce products that may or may not be sold to Caesars's Entertainment. These global emissions have then been allocated to Caesars Entertainment.

**Verified**
No

These emissions include those from PepsiCo’s company-owned operations that have been allocated to Restaurant Brands International. Major sources include fuel use in PepsiCo’s wholly-owned or operated manufacturing facilities globally that produce products that may or may not be sold to Restaurant Brands International. Also included is fuel use in transportation vehicles that are wholly-owned or operated by PepsiCo.

**Verified**
No

**Allocation method**
Allocation based on the market value of products purchased

Please explain how you have identified the GHG source, including major limitations to this process and assumptions made
Our method for allocating emissions is to take the percentage of PepsiCo’s net revenue attributable to the customer in the reporting year and apply this percentage to our global Scope 1, Scope 2 or Scope 3 emissions. Thus, our method does not distinguish between emissions from facilities that produce product sold to the customer versus emissions from all PepsiCo’s production facilities world-wide.

**SC1.2**

(SC1.2) Where published information has been used in completing SC1.1, please provide a reference(s).

**SC1.3**

(SC1.3) What are the challenges in allocating emissions to different customers, and what would help you to overcome these challenges?

<table>
<thead>
<tr>
<th>Allocation challenges</th>
<th>Please explain what would help you overcome these challenges</th>
</tr>
</thead>
<tbody>
<tr>
<td>Customer base is too large and diverse to accurately track emissions to the customer level</td>
<td>Currently PepsiCo follows the Greenhouse Gas (GHG) Protocol guidelines in developing an annual emissions inventory. Data is collected from our facilities world-wide following an operational control approach. Our facilities manufacture a diverse range of products and we do not have dedicated facilities by customer. Therefore, developing an emissions inventory or allocating emissions by customer accurately will not be possible in the foreseeable future. PepsiCo would benefit from an industry level solution or methodology for allocation that takes into account current challenges in data systems and inventory processes for companies like PepsiCo.</td>
</tr>
</tbody>
</table>
SC1.4

(SC1.4) Do you plan to develop your capabilities to allocate emissions to your customers in the future?
No

SC1.4b

(SC1.4b) Explain why you do not plan to develop capabilities to allocate emissions to your customers.

PepsiCo does not currently have the capability to allocate emissions for the many thousands of product types currently sold to our customers, or to allocate those emissions to the many individual customers we have.

To address this, PepsiCo supports industry-wide solutions that allocate emissions in a consistent and credible way. PepsiCo is a member of the Beverage Industry Environmental Roundtable, which has developed and published sector specific guidelines on environmental footprint of products. PepsiCo is also interacting with expert stakeholders including the Carbon Trust, World Resources Institute, World Business Council on Sustainable Development, and the Sustainability Consortium, as well as other stakeholders such as Non-Governmental Organizations, other companies, academic institutions and governments to support the introduction of common approaches to measure environmental footprint worldwide and to develop new global standards for quantifying enterprise and product-level greenhouse gas emissions.

SC2.1

(SC2.1) Please propose any mutually beneficial climate-related projects you could collaborate on with specific CDP Supply Chain members.

SC2.2

(SC2.2) Have requests or initiatives by CDP Supply Chain members prompted your organization to take organizational-level emissions reduction initiatives?
Yes

SC2.2a

(SC2.2a) Specify the requesting member(s) that have driven organizational-level emissions reduction initiatives, and provide information on the initiatives.

Group type of project
Change to supplier operations

Type of project
Implementation of energy reduction projects

Description of the reduction initiative
As part of our Performance with Purpose (PwP) agenda, PepsiCo has a goal to reduce our entire value chain (Scope 1, 2 and 3) emissions by at least 20% by 2030 against a 2015 baseline. These reductions relate to our operational emissions and are due to a number of measures undertaken within our facilities and fleet. Main programs contributing are our Resource Conservation (ReCon) program and fleet efficiency program.
