F0. Introduction

(F0.1) Give a general description of and introduction to your organization.

PepsiCo products are enjoyed by consumers more than one billion times a day in more than 200 countries and territories around the world. PepsiCo generated more than $64 billion in net revenue in 2018, driven by a complementary food and beverage portfolio that includes 22 brands that generate more than $1 billion each in estimated annual retail sales (e.g., Frito-Lay, Gatorade, Pepsi-Cola, Quaker and Tropicana). At the heart of PepsiCo is Performance with Purpose (PwP) - our goal to deliver top-tier financial performance while creating sustainable growth and shareholder value. In practice, PwP means providing a wide range of foods and beverages from treats to nutritious eats; trying to find innovative ways to reduce our impact on the environment and lower our operating costs; working to provide a safe and inclusive workplace for our employees globally; and respecting, supporting and investing in the local communities where we operate.

This CDP Forests Security Questionnaire contains statements reflecting our views about our future performance that constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995 (Reform Act). Statements that constitute forward-looking statements within the meaning of the Reform Act are generally identified through the inclusion of words such as “aim,” “anticipate,” “believe,” “drive,” “estimate,” “expect,” “expressed confidence,” “forecast,” “future,” “goal,” “guidance,” “intend,” “may,” “objective,” “outlook,” “plan,” “position,” “potential,” “project,” “seek,” “should,” “strategy,” “target,” “will” or similar statements or variations of such words and other similar expressions. All statements addressing our future operating performance, and statements addressing events and developments that we expect or anticipate will occur in the future, are forward-looking statements within the meaning of the Reform Act. These forward-looking statements are based on currently available information, operating plans and projections about future events and trends. They inherently involve risks and uncertainties that could cause actual results to differ materially from those predicted in any such forward-looking statement. These risks and uncertainties include, but are not limited to, those described in “Item 1A. Risk Factors” and “Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations - Our Business - Our Business Risks.” Investors are cautioned not to place undue reliance on any such forward-looking statements, which speak only as of the date they are made. We undertake no obligation to update any forward-looking statement, whether as a result of new information, future events or otherwise. The discussion of risks below and elsewhere in this report is by no means all-inclusive but is designed to highlight what we believe are important factors to consider when evaluating our future performance.

Cattle products are only used in a few PepsiCo products in a small number of countries. Our current focus is on timber and palm oil, as we source substantially more of these commodities. As of 2016, PepsiCo only sourced soy from four suppliers in Brazil. In 2016, we purchased less than 0.1% of the global supply of soy.

(F0.6) Are there any parts of your direct operations not included in your disclosure?

No

(F0.7) Are there any parts of your supply chain not included in your disclosure?

No

Comment
The top three countries from which PepsiCo sources palm oil are Indonesia, Malaysia and Mexico. In 2018, our global purchase of palm oil was approximately 470,000 metric tons (MT). Of this total, palm kernel oil comprised almost 4,700 MT. PepsiCo uses refined palm oil and palm oil derivatives. Procurement dollar spend is based on our last calculation from 2016.

PepsiCo plans to develop and maintain a deeper understanding of our paper-based packaging supply chain and our supply base sourcing as close to the forest of origin as possible. This goal is an extremely complex undertaking since PepsiCo does not purchase direct raw material from the forest. However, such action is useful toward achieving our ultimate goal to only purchase responsibly sourced wood fiber products.

F1.4
(F1.4) For your disclosed commodity(ies), indicate if you collect data regarding your own compliance and/or the compliance of your suppliers with the Brazilian Forest Code.

**Timber**

**Do you collect data regarding compliance with the Brazilian Forest Code?**
Yes, from suppliers

**Please explain**
In order to source from Brazil, PepsiCo must comply with the Brazilian Forest Code. In addition to being articulated within our Supplier Code of Conduct (compliance with all applicable environmental laws and regulations), suppliers complete a self-assessment that assesses compliance with all applicable environmental laws in the country. In the case of suppliers in Brazil, this would then be further verified by an independent auditor, as part of the Sedex Members Ethical Trade Audit (SMETA) on-site audits conducted with these suppliers, as part of the Sustainable Sourcing Program. Legal environmental compliance is reviewed as part of the SMETA 4-Pillar methodology, section 10B4.1, stating: 10B4.1 Businesses as a minimum must meet the requirements of local and national laws related to environmental standards.

**Palm Oil**

**Do you collect data regarding compliance with the Brazilian Forest Code?**
Yes, from suppliers

**Please explain**
In order to source from Brazil, PepsiCo must comply with the Brazilian Forest Code. In addition to being articulated within our Supplier Code of Conduct (compliance with all applicable environmental laws and regulations), suppliers complete a self-assessment that assesses compliance with all applicable environmental laws in the country. In the case of suppliers in Brazil, this would then be further verified by an independent auditor as part of the SMETA on-site audits conducted with these suppliers as part of the Sustainable Sourcing Program. Legal environmental compliance is reviewed as part of the SMETA 4-Pillar methodology, section 10B4.1, stating: 10B4.1 Businesses as a minimum must meet the requirements of local and national laws related to environmental standards.
For your disclosed commodity(ies), indicate which Key Performance Indicators (KPIs) you use to measure the compliance of your suppliers with the Brazilian Forest Code and their performance against these indicator(s).

**Forest risk commodity**

**Timber**

**KPIs and performance**

% of suppliers on the Rural Environmental Registry (CAR) database

Other, please specify (FSC certification, Sedex Members Ethical Trade Audit (SMETA) audit compliance)

**Number of suppliers**

7

**Please explain**

In order to source from Brazil, PepsiCo must comply with the Brazilian Forest Code. We prioritize Forest Stewardship Council (FSC) certified purchases, which ensures compliance with the Forest Code. In addition to being articulated within our Supplier Code of Conduct (compliance with all applicable environmental laws and regulations), suppliers complete a self-assessment that assesses compliance with all applicable environmental laws in the country. In the case of suppliers in Brazil, this would then be further verified by an independent auditor as part of the Sedex Members Ethical Trade Audit (SMETA) on-site audits conducted with these suppliers as part of the Sustainable Sourcing Program. Legal environmental compliance is reviewed as part of the SMETA 4-Pillar methodology, section 10B4.1, stating: 10B4.1 Businesses as a minimum must meet the requirements of local and national laws related to environmental standards.

F1.6
Have you identified sufficient sources of sustainable materials to meet your current operational needs? If yes, what are you doing to ensure the security/continuity of this supply?

**Timber**

**Sustainable source identified**
Yes

**Primary action to ensure supply**
Supplier improvement plans to increase capacity of supply

**Please explain**

i. Actions: PepsiCo seeks to only purchase responsibly sourced wood fiber products and does not knowingly accept from its supply chain paper-based packaging that may contain wood fiber harvested illegally or sourced from protected forest areas. PepsiCo is focused on developing and maintaining a deeper understanding of our paper-based packaging supply chain and our supply base sourcing as close to the forest of origin as possible. This is an extremely complex undertaking since PepsiCo does not purchase direct raw material from the forest. However, such action is important to achieving our ultimate goal of only purchasing responsibly sourced wood fiber products. To that end, PepsiCo has an ongoing engagement with Proforest, an organization with expertise in managing natural resources sustainably, to understand the level of certified paper packaging material purchased by PepsiCo today and our ability to increase this quantity. These data collection efforts will help us prioritize our efforts in areas of greatest risk and opportunity. PepsiCo also works with its suppliers to help them to be environmentally sustainable in their practices by following credible forestry standards and purchasing their wood fiber only from sources that support responsible forest management, as outlined in our policies. PepsiCo recognizes the forestry standards below as credible within their scope and requires our suppliers to commit to utilizing an appropriate standard: Sistema Brasileiro de Certificação Florestal in Brazil (CERFLOR), Canadian Standards Association’s Sustainable Forest Management Standards (CSA), Forest Stewardship Council (FSC), and Program for the Endorsement of Forest Certification Schemes (PEFC), and Sustainable Forestry Initiative (SFI).

ii. Timeframe: Our volumes are secured via two-year contracts. We employ specialists to secure adequate supplies and have not experienced any significant continuous shortages that we anticipate will prevent us from meeting our requirements in the foreseeable future.

**Palm Oil**

**Sustainable source identified**
Yes

**Primary action to ensure supply**
Engaging in capacity building activities in the value chain

**Please explain**

i. Actions: PepsiCo aims to source 100% physically-certified sustainable palm oil (CSPO) by the end of 2020, publishing a Palm Oil Action Plan in 2015 describing our strategy and releasing annual Palm Oil Action Plan Progress Reports. In 2018, we achieved 52% physically-certified sustainable palm oil, exceeding our interim target of 50% for 2018. We encouraged our direct suppliers to be RSPO members; since 2017, 100% of our direct suppliers have been RSPO members. We are also aiming for 100% traceability to the mill; in 2018, 97% of our supply met this goal. Since launching our Traceability to Plantation Protocol, 26 suppliers representing 32% of our volume reported traceability to plantation in 2018; our goal is to achieve traceability to the farm/plantation by the end of 2020. Implementation of our supplier scorecard to track and encourage our suppliers’ progress toward increasing sustainable palm has seen our suppliers improve their overall performance by 39% against the 2017 baseline. The scorecard mechanism supports PepsiCo’s efforts to build suppliers’ capability to deliver NDPE (no deforestation, no development on peatlands, and no exploitation of indigenous peoples and local communities) compliant palm oil, and to address non-compliances found in our supply chain. Finally, our impact programs prioritize capacity building, particularly training and development. Examples in 2018 include being a founding member for the Coalition for Sustainable Livelihoods (CSL) to create sustainable commodity value chains (including palm oil) in North Sumatra and Aceh, and partnering with the Mexican Federation for Palm Oil (FEMEXPALMA) - an impartial entity representing mills and growers and promoting the sustainable production of palm oil in Mexico - to provide training, instructional videos and implementation guides to accelerate the adoption of sustainable practices in Mexico, and working with six companies to design a landscape program for sustainable palm oil in the districts of Siak and Pelalawan, Indonesia. Our policy and commitments apply to all our products, regardless of the source of production. ii. Timeframe: The availability of RSPO credits should allow us to achieve 100% in the near-term as we continue to support market development. In 2019, our interim goal is to source 80% physically-certified sustainable palm oil, with a 100% target by 2020.
F1.7a

(F1.7a) Describe the forests-related detrimental impacts experienced by your organization, your response, and the total financial impact.

<table>
<thead>
<tr>
<th>Forest risk commodity</th>

</thead>
<tbody>
<tr>
<td>Impact driver type</td>
<td>Reputational and markets</td>
</tr>
<tr>
<td>Primary impact driver</td>
<td>Increased stakeholder concern or negative stakeholder feedback</td>
</tr>
</tbody>
</table>

Primary impact
Brand damage

Description of impact
i. Description: PepsiCo has witnessed a growing interest among Socially Responsible Investors (SRIs), non-governmental agencies, and other key stakeholders in our practices associated with forest impact. PepsiCo has closely monitored consumer and customer campaigns and their general interest in our response to deforestation risks.

ii. Scale of impact: Increased stakeholder concerns have not yet represented substantive detrimental impacts on our business. However, PepsiCo's aim is to demonstrate our responsibility toward forest-related stewardship and transparent communication regarding our efforts to mitigate concerns as changes in consumer preference, due to a negative reaction to PepsiCo's reputation relative to the environment, could adversely affect PepsiCo's business.

Primary response
Greater due diligence

Total financial impact

Description of response
i. Stakeholders and outcomes: PepsiCo recognizes the importance of having a credible system for third parties to raise concerns where they believe our standards are not being met. Our Speak Up Hotline provides a means to report suspected violations of our policies or applicable law. Our grievance mechanism for our agricultural supply chain complements our existing program to help prevent, identify and manage environmental and social concerns throughout our value chain, including those associated with timber. This allows third parties to raise concerns that our environmental and social goals and policies may not be upheld within our agricultural supply chain. Our approach is available here: https://www.pepsico.com/docs/album/esg-topics-policies/agricultural-supply-chain-grievance-mechanism-summary.pdf. We have engaged our direct suppliers who source from the companies at the center of complaints in 2018 to 1) Validate the allegations, 2) Demonstrate the importance we attach to addressing the concerns raised, 3) Understand corrective action steps already taken and planned in the future, and 4) Influence those actions, monitor progress towards completion and ultimately address the complaint. In 2019, we will continue to address existing and new grievances, as well as review the running of our grievance process to ensure it is meeting its objectives. ii. Cost impact: This figure is confidential.

Primary impact
Brand damage

Description of impact
i. Description: Agriculture is an integral part of PepsiCo's supply chain. The raw materials we use to produce our products are largely commodities subject to price volatility and fluctuations in availability caused by changes in global supply and demand, weather conditions, agricultural uncertainty or government incentives and controls. We have witnessed a growing interest among SRIs, non-governmental agencies, and other key stakeholders in the link between palm oil and deforestation. PepsiCo has closely monitored consumer and customer campaigns and their general interest in the responsible sourcing of palm oil in our business.

ii. Scale of impact: Increased stakeholder concerns have not yet represented substantive detrimental impacts on our business. However, PepsiCo aims to demonstrate our responsibility toward forest-related stewardship and transparent communication regarding our efforts to mitigate concerns, as changes in consumer preference due to a negative reaction to PepsiCo's reputation relative to the environment, could adversely affect PepsiCo's business.
relative to the environment, could adversely affect PepsiCo's business.

**Primary response**

Engagement in multi-stakeholder initiatives

**Total financial impact**

**Description of response**

i. Stakeholders and outcomes: In 2015, we published the PepsiCo Palm Oil Action Plan, describing our strategy for sourcing sustainable palm oil. We disclose our work in annual Palm Oil Progress Reports synchronized with our Annual Communication of Progress to the RSPO. Stakeholder collaboration is vital to achieving our goal of sourcing 100% sustainable palm oil by the end of 2020. In 2018, we continued engaging with industry platforms such as the Consumer Goods Forum, AIM-Progress, and the Tropical Forest Alliance. We met regularly with non-governmental agencies to discuss our efforts, exchange information and consider ways to achieve shared objectives. We publicly support RSPO NEXT, encouraging our direct suppliers to be RSPO members; since 2017, 100% of our direct suppliers have been members. Our grievance mechanism allows third parties to raise concerns that our environmental and social goals and policies may not be upheld within our agricultural supply chain. We have engaged direct suppliers who source from companies at the center of complaints in 2018 to 1) Validate the allegations, 2) Demonstrate the importance we attach to addressing the concerns raised, 3) Understand corrective action steps already taken and planned in the future, and 4) Influence those actions, monitor progress towards completion and ultimately address the complaint. In 2019, we plan to review our grievance process to ensure it is meeting its objectives. ii. Cost impact: This figure is confidential.

How far into the future are risks considered?
1 to 3 years

Tools and methods used to identify and assess risks
Internal company methods
External consultants

Please explain
i. PepsiCo assesses deforestation risks in our paper-based packaging supply chain on an annual basis using internal methods and external support from Proforest, with results being reported to the senior vice president, chief supply officer. The combination of internal and external input into our risk assessment process helps see that necessary expertise is available to have thorough coverage of stakeholder considerations and the overall commodity landscape. The risk assessment procedure is chosen to help identify the sustainability risks in the commodity and where they exist in our supply chain. This is part of an ongoing process through which we work with our suppliers to help them become more environmentally sustainable in their practices by following credible forestry standards and purchasing their wood fiber only from sources that support responsible forest management, as outlined in our policies. To enable a greater understanding of and visibility into our supply chain, in 2016, PepsiCo began working with Proforest to trace the supply chain and support implementation of our policies related to paper packaging. ii. For example, Proforest conducts on an ongoing basis an assessment of certification schemes that we recognize (e.g., CERFLOR, CSA, FSC, PEFC, SFI) to analyze the extent to which they deliver PepsiCo requirements, as outlined in our Forestry Stewardship, Land Use and Sustainable Packaging policies. In addition, Proforest conducted a rapid assessment of our current performance and overview of risks involved in the main regions/countries of our paper packaging supply base. These findings are being addressed as we renew contracts starting in 2018, particularly for areas of higher risk such as Russia, China and parts of Southeast Asia.

External consultants

Please explain
i. PepsiCo assesses deforestation risks in our palm oil supply chain on an ongoing basis using internal methods and external support from Proforest and One Peterson, an independent third party. The combination of internal and external input into our risk assessment process helps see that necessary expertise is available to have thorough coverage of stakeholder considerations and the overall commodity landscape. The risk assessment procedure is chosen to help identify the sustainability risks in the commodity and where they exist in our supply chain. We conduct risk assessments as a tool to identify regions that have the highest likelihood of noncompliance and prioritize our efforts to raise standards accordingly. ii. For example, PepsiCo worked with One Peterson and Proforest to develop and implement a Traceability Protocol, and in 2017, launched our verification process that stresses PepsiCo’s goals on High Carbon Stock, High Conservation Values, peatlands, land rights, Free Prior Informed Consent, human rights, and no burning, as described by RSPO. We also commissioned internal reports from Proforest on the structure of the palm oil industry and associated social and environmental risks in several geographies around the world. Internally, our Sustainable Sourcing Program (SSP) assesses risk and monitors supplier compliance with our Supplier Code of Conduct on an ongoing basis through third-party auditing of our most business-critical direct suppliers, contract manufacturing and co-packing locations across 68 countries. Through this program, these direct suppliers are responsible for demonstrating compliance with PepsiCo’s expectations through activities that include completion of Supplier Code of Conduct training, scored site-level Self-Assessment Questionnaires, and participation in on-site audits, as required, based on the Sedex Members Ethical Trade Audit 4-Pillar, or equivalent protocols. Feedback from audits conducted as part of our SSP is then integrated into our risk assessments.

F2.1b

(F2.1b) Which of the following issues are considered in your organization’s forests-related risk assessment(s)?
Availability of forest risk commodities

Relevance & inclusion
Relevant, always included

Please explain
i. Importance of issue: We believe that our most significant influence on forests is through our sourcing of paper and wood-based products and raw agricultural materials. PepsiCo is working to realize zero deforestation in our company-owned and -operated facilities and global supply chains from direct supplier to source by the end of 2020. The availability of forest risk commodities, specifically, the availability and quality of commodities that meet specific certification criteria or other measures of sustainable procurement is vital to meet our goal. ii. Usage in decision-making: Our assessments of risk are based on our Enterprise Risk Management process and consultation with subject matter experts throughout the business on our key environmental risks. Factored criteria include, but are not limited to: regulation, changes in commodity availability, price increases for commodities and reputational risk. On palm oil, we worked with Proforest to develop a risk analysis and mitigation plan, as well as a verification process that stresses PepsiCo’s goals on High Carbon Stock (HCS), High Conservation Values (HCV), peatlands, land rights, including Free, Prior and Informed Consent (FPIC), human rights, as defined by the United Nations Universal Declaration of Human Rights, and no burning, as described by RSPO. This work involves a risk assessment of direct suppliers and their supply base (leveraging the mill traceability data) to identify, assess, prioritize and address top compliance risks under PepsiCo’s policies, including recommending priority mills and supply bases for verification assessments and wider engagement. The process entails site-based verification assessments and eventual engagement with site-assessed suppliers to monitor implementation of continuous improvement plans.

Quality of forest risk commodities

Relevance & inclusion
Relevant, always included

Please explain
i. Importance of issue: We believe that our most significant influence on forests is through our sourcing of paper and wood-based products and raw agricultural materials. PepsiCo is working to realize zero deforestation in our company-owned and -operated facilities and global supply chains from direct supplier to source by the end of 2020. The availability of forest risk commodities, specifically, the availability and quality of commodities that meet specific certification criteria or other measures of sustainable procurement is vital to meet our goal. ii. Usage in decision-making: Our assessments of risk are based on our Enterprise Risk Management process and consultation with subject matter experts throughout the business on our key environmental risks. Factored criteria include, but are not limited to: regulation, changes in commodity availability, price increases for commodities and reputational risk. On palm oil, we worked with Proforest to develop a risk analysis and mitigation plan, as well as a verification process that stresses PepsiCo’s goals on HCS, HCV, peatlands, land rights, including FPIC, human rights, as defined by the UN Universal Declaration of Human Rights, and no burning, as described by RSPO. This work involves a risk assessment of direct suppliers and their supply base (leveraging the mill traceability data) to identify, assess, prioritize and address top compliance risks under PepsiCo’s policies, including recommending priority mills and supply bases for verification assessments and wider engagement. The process entails site-based verification assessments and eventual engagement with site-assessed suppliers to monitor implementation of continuous improvement plans.

Impact of activity on the status of ecosystems and habitats

Relevance & inclusion
Relevant, always included

Please explain
i. Importance of issue: Like many of our stakeholders, PepsiCo has ongoing concerns about how some palm oil is produced. Rainforest conversion, biodiversity loss and other impacts to ecosystems and habitats persist in various producing regions. Our commodity purchasing activities also run the risk of HCS/HCV forest and peatlands being converted to other land uses, resulting in noncompliance with our Forestry Stewardship Policy. ii. Usage in decision-making: Our assessments of risk are based on our Enterprise Risk Management process and consultation with subject matter experts throughout the business on our key environmental risks. Factored criteria include, but are not limited to: regulation, changes in commodity availability, price increases for commodities and reputational risk.
Regulation

Relevance & inclusion
Relevant, always included

Please explain
i. Importance of issue: PepsiCo operates globally, which requires us to comply with numerous local regulations. As PepsiCo implements its risk assessment process, we believe that environmental and human rights issues are systemic in some regions. Adding to the challenge are inconsistent federal and local regulations that vary from place to place. As a result of these factors, broad industry collaboration and investment are beneficial, but coordination on such a broad level requires new mechanisms, improved institutions and greater capacity than currently exists. We are seeing increasing interest from national governments and supra-national agencies in the impact of deforestation and in setting regulations to increase transparency and reduce the environmental and social impacts of deforestation around the world. We have also seen an increase in international cooperation, which is highlighted by UN Conference of the Parties (COP)-17 and the Rio+20 Conferences that led to the REDD+ program enhancement, the U.S. Lacey Act, and the European Union Timber regulations. ii. Usage in decision-making: Our assessments of risk are based on our Enterprise Risk Management process and consultation with subject matter experts and Government Affairs experts throughout the business on our key environmental risks. Factored criteria include, but are not limited to: regulation, changes in commodity availability, price increases for commodities and reputational risk. Through our Forestry Stewardship Policy, Land Use Policy, Palm Oil Commitments, Palm Oil Action Plan and Sustainable Packaging Policy, PepsiCo has created a robust framework to help achieve our goal of zero deforestation in our company-owned and -operated facilities and global supply chains from direct suppliers to source by the end of 2020. Our policy framework, deforestation-related sourcing standards, and decision-making processes are meant to help us stay ahead of regulatory requirements. Additionally, PepsiCo has been working to develop country-specific risk profiles starting with our largest sources of supply, thereby identifying regions that have the highest likelihood of noncompliance and prioritizing our efforts to raise standards accordingly.

Climate change

Relevance & inclusion
Relevant, always included

Please explain
i. Importance of issue: There is an increased focus, including by governmental and non-governmental agencies, investors, customers and consumers, on these and other environmental sustainability matters, including deforestation, land use, climate impact and water use. Our reputation could be adversely affected if we do not act, or are perceived not to act, responsibly with respect to our impact on the environment. ii. Usage in decision-making: Realizing the connection between deforestation and climate change, PepsiCo established an ambitious science-based goal to reduce absolute greenhouse gas (GHG) emissions by at least 20% across our value chain by 2030. Our GHG emissions reduction goal covers our entire value chain (scope 3) and has been approved by the Science Based Targets Initiative, a collaboration between CDP, the United Nations Global Compact, World Resources Institute (WRI) and the World Wide Fund for Nature (WWF) that defines and promotes best practice in science-based target setting. Our approved goal means that PepsiCo is doing its part to help limit global temperature increase to 2˚ Celsius. To achieve this goal, we must reduce emissions in our agricultural supply chain, including palm oil, by implementing our NDPE policy commitments (specifically no deforestation and no development on peatlands). This directly ties to PepsiCo’s efforts to realize our goal of zero deforestation in our company-owned and -operated facilities and global supply chains from direct supplier to source by the end of 2020. Recognizing potential environmental benefits, including climate and biodiversity, as well as human rights, we have committed to source 100% physically-certified palm oil by the end of 2020.

Impact on water security

Relevance & inclusion
Relevant, always included

Please explain
i. Importance of issue: There is an increased focus, including by governmental and non-governmental agencies, investors, customers and consumers, on these and other environmental sustainability matters, including deforestation, land use, climate impact and water use. Our reputation could be adversely affected if we do not act, or are perceived not to act, responsibly with respect to our impact on the environment. ii. Usage in decision-making: PepsiCo continues to assess environmental risk, including those related to water security, in our supply base; this includes supporting industry platforms - such as WRI’s GFW Universal Mill List and the GFW Pro platform - to identify risks at the mill and plantation level (https://www.globalforestwatch.org/). Additionally, in our efforts to achieve our water efficiency goals, we are investing in projects in high water-risk watersheds that improve the quantity and/or the quality of the water in the watershed. These include watershed protection projects like reforestation, wetlands rehabilitation, and aquifer recharge.
Tariffs or price increases

Relevance & inclusion
Relevant, always included

Please explain
i. Importance of issue: Many of the commodities used in our products are purchased in the open market. The prices we pay for such items are subject to fluctuation, and any increases could adversely impact our costs and operating profit. ii. Usage in decision-making: PepsiCo manages this risk through the use of fixed-price contracts and purchase orders, pricing agreements and derivative instruments, including swaps and futures. In addition, risk to our supply of certain raw materials is mitigated through purchases from multiple geographies and suppliers. When prices increase, we may or may not pass on such increases to our customers. In addition, we are making investments to improve the sustainability and resources of our agricultural supply chain, including the development of our initiative to advance sustainable farming practices by our suppliers and expanding it globally.

Loss of markets

Relevance & inclusion
Not relevant, explanation provided

Please explain
Loss of markets is not a relevant issue for consideration in our forests-related risk assessments.

Brand damage related to forest risk commodities

Relevance & inclusion
Relevant, always included

Please explain
i. Importance of issue: Damage to our reputation or brand image, or loss of consumer confidence in our products or employees could result in decreased demand for our products and could adversely affect our business, financial condition or results of operations, as well as require additional resources to rebuild our reputation. PepsiCo has witnessed a growing interest among Socially Responsible Investors, non-governmental agencies and other key stakeholders in the link between palm oil and deforestation. This interest may lead to brand damage and reputational risk, a key criterion considered not just in our commodity-specific risk assessment process but also in our Enterprise Risk Management process. For example, our company has faced accusations related to our palm oil supply chain and our efforts to address both environmental and social sustainability within the space. ii. Usage in decision-making: PepsiCo has closely monitored consumer and customer campaigns and their general interest in the responsible sourcing of palm oil in our business in order to appropriately respond to concerns, leading to increased transparency for several deforestation-related efforts, including our Palm Oil Progress Reports and recently developed grievance mechanisms. Our assessments of risk are based on our Enterprise Risk Management process and consultation with subject matter experts throughout the business on our key environmental risks. Factored criteria include: reputational risks, such as potential brand damage caused by increased stakeholder concerns regarding social and environmental impacts of PepsiCo’s activities with regard to our forest-risk commodities.

Corruption

Relevance & inclusion
Relevant, always included

Please explain
i. Importance of issue: Like many of our stakeholders, PepsiCo has ongoing concerns about how some palm oil is produced. As with other agricultural commodities that rely on seasonal labor and workers meeting “piece-rate” quotas, there are a number of risks for workers in the supply chain. These include rights of temporary workers, working hours and pay, forced labor and underage labor. Additionally, some commodities are sourced from countries experiencing civil unrest or political instability, where corruption may also be present, leading to potential disruption in supply. Finally, there is also an increased focus, including by governmental and non-governmental agencies, investors, customers and consumers on these and other environmental sustainability matters, including deforestation and land use, where risks could be exacerbated by corruption. Our reputation could be adversely affected if we or others in our industry do not act, or are perceived not to act, responsibly with respect to our impact on the environment. ii. Usage in decision-making: We have developed a grievance mechanism for dealing with environmental and social complaints involving palm oil and other agricultural raw materials in our supply chain. Our aim is to uphold our policies and achieve positive outcomes and, among food and beverage companies, we believe our mechanism is the leading practice. Consistent with our alignment with the UN Guiding Principles on Business and Human Rights, we have sought to use our relationships to bring resolution to deforestation-related complaints involving our supply chain.
Social impacts

Relevance & inclusion
Relevant, always included

Please explain
i. Importance of issue: Like many of our stakeholders, PepsiCo has ongoing concerns about how some palm oil is produced. Human rights abuses persist in certain producing regions. As with other agricultural commodities that rely on seasonal labor and workers meeting “piece-rate” quotas, there are a number of risks for workers in the supply chain. This includes rights of temporary workers, working hours and pay, forced labor and underage labor. ii. Usage in decision-making: We have developed a grievance mechanism for dealing with environmental and social complaints involving palm oil and other agricultural raw materials in our supply chain. Relevance & inclusion
Not considered

Please explain

F2.1c

(F2.1c) Which of the following stakeholders are considered in your organization’s forests-related risk assessments?

Customers

Relevance & inclusion
Relevant, always included

Please explain
i. Example of risk considered: PepsiCo has witnessed a growing interest among Socially Responsible Investors (SRIs), non-governmental agencies, and other key stakeholders in the link between palm oil and deforestation. PepsiCo has closely monitored consumer and customer campaigns and their general interest in the responsible sourcing of palm oil in our business. This interest may lead to reputational risk, a key criterion considered not just in our commodity-specific risk assessment process but also in our Enterprise Risk Management process. ii. Method of engagement: Transparency is important for our risk mitigation efforts in response to customer concerns, particularly in relation to potential reputational impacts. PepsiCo’s Performance with Purpose (PwP) agenda includes a comprehensive sustainability reporting effort across a wide array of topics, including deforestation and palm oil. We provide regular, detailed information on progress toward delivering on these PwP goals, all of which are publicly available to stakeholders on our website. Additionally, we solicit feedback from civil society through direct meetings and workshops and consider reports by civil society and other organizations.

Employees

Relevance & inclusion
Not relevant, explanation provided

Please explain
While PepsiCo is cognizant of the link between corporate responsibility and employee satisfaction and retention, employees are not considered to be a relevant stakeholder specific to forests-related issues and therefore are not included in our current risk assessments.
Investors

Relevance & inclusion
Relevant, always included

Please explain
i. Example of risk considered: PepsiCo has witnessed a growing interest among and other key stakeholders in the link between palm oil and deforestation. This interest may lead to reputational risk, a key criterion considered not just in our commodity-specific risk assessment process but also in our Enterprise Risk Management process. Additionally, commodity-specific risks such as availability and quality of the inputs required to make our products could potentially disrupt business operations, leading to investor concern. ii. Method of engagement: Transparency is important for our risk mitigation efforts in response to investor concerns, particularly in relation to potential reputational risk. We provide regular, detailed information on progress toward delivering our PwP goals, all of which are publicly available to stakeholders on our website. In terms of potential business disruption related to commodity risks, this communication demonstrates to investors PepsiCo’s long-term priority to make our growth, our operations and our impact more sustainable.

Local communities

Relevance & inclusion
Relevant, always included

Please explain
i. Example of risk considered: As a significant buyer of palm oil, PepsiCo is an important participant in addressing land-related human rights issues in the industry, which can affect the local communities in which PepsiCo and our suppliers operate. We have identified land rights as an important human rights issue - the human right at risk with the potential for severe impact on the Company's operations and supply chains. PepsiCo's human rights issues also include land-related issues, such as human right to water, and vulnerable workers, such as women. ii. Method of engagement: A key milestone in PepsiCo's approach to the sustainable sourcing of palm oil was our 2014 commitment to “zero tolerance” for land grabs across its supply chains. PepsiCo has also made a number of time-bound implementation plans regarding its land rights commitments in Brazil, Mexico, Thailand and Indonesia. For example, PepsiCo committed to participate in Oxfam's FAIR Company-Community Partnerships project in Indonesia. The project promotes a model for sustainable palm oil that benefits women, smallholder farmers, local communities, the environment and participating companies. In Riau, Indonesia, PepsiCo is one of seven companies who are working together on a landscape program for sustainable palm oil in the districts of Siak and Pelalawan. The goal of the program is to create sustainable landscapes across both districts that will produce deforestation-free and exploitation-free palm oil and maintain or enhance key conservation areas. This will build upon existing local efforts and multi-stakeholder platforms to advance a shared vision of sustainable, inclusive palm oil production models.

NGOs

Relevance & inclusion
Relevant, always included

Please explain
i. Example of risk considered: PepsiCo has witnessed a growing interest among SRIs, non-governmental organizations (NGOs), and other key stakeholders in the link between palm oil and deforestation. PepsiCo has closely monitored consumer and customer campaigns and their general interest in the responsible sourcing of palm oil in our business. This interest may lead to reputational risk, a key criterion considered not just in our commodity-specific risk assessment process but also in our Enterprise Risk Management process. ii. Method of engagement: Transparency is important for our risk mitigation efforts in response to NGO concerns, particularly in relation to potential reputational risk. We provide regular, detailed information on progress toward delivering our PwP goals, all of which are publicly available to stakeholders on our website. Additionally, we solicit feedback from civil society through direct meetings and workshops and consider reports by civil society and other organizations. For example, PepsiCo became a founding member of the Coalition for Sustainable Livelihoods (CSL). CSL is a group of civil society and private sector organizations with a shared interest in sustainable development, active investments in the Aceh and North Sumatra provinces of Indonesia, and a strong desire to work collaboratively with government. The coalition members have agreed to work collectively to achieve common objectives for smallholder livelihoods, sustainable agricultural production and conservation in North Sumatra and Aceh. Finally, PepsiCo speaks regularly with NGOs, with missions ranging from environmental conservation to protection of human rights. In particular, we regularly engage with civil society and other stakeholders to review our policy, our progress and our future actions. We are working to address issues raised via this feedback process, including a desire for clearer statements on our aspirations for an NDPE free supply chain, the scope of our policy and the request to apply our policy to companies in our supply chain at the company wide level, and the need for greater confidence in the independent verification that standards are being met throughout the palm oil supply chain.
Other forest risk commodity users/producers at a local level

Relevance & inclusion
Relevant, always included

Please explain
i. Example of risk considered: As a buyer of palm oil, PepsiCo is an important participant in addressing land-related human rights issues in the industry, which can affect other forest risk commodity users/producers with whom PepsiCo and our suppliers do business. PepsiCo has identified land rights as an important human rights issue - the human right at risk with the potential for severe impact on the Company’s operations and supply chains. PepsiCo’s human rights issues also include land-related issues, such as the human right to water, and vulnerable workers, such as women. ii. Method of engagement: A key milestone in PepsiCo’s approach to the sustainable sourcing of palm oil was our 2014 commitment to “zero tolerance” for land grabs across our supply chains. PepsiCo has also made several time-bound implementation plans regarding its land rights commitments in Brazil, Mexico, Thailand and Indonesia. Finally, PepsiCo committed to participate in Oxfam’s FAIR Company-Community Partnerships project in Indonesia. The project promotes a model for sustainable palm oil that benefits women, smallholder farmers, local communities, the environment and participating companies.

Regulators

Relevance & inclusion
Relevant, always included

Please explain
i. Example of risk considered: PepsiCo is seeing increasing interest from national governments and supra-national agencies in the impact of deforestation and in setting regulations to increase transparency and reduce the environmental and social impacts of deforestation around the world. We have also seen an increase in international cooperation, which is highlighted by UN Conference of the Parties (COP)-17 and the Rio+20 Conferences that led to the REDD+ program enhancement, the U.S. Lacey Act and the European Union Timber regulations. PepsiCo stays informed of current and emerging regulatory risks for compliance purposes and also looks to collaborate with regulators and governments to build capacity for sustainable procurement and ensure continued availability and quality of sustainable supplies. ii. Method of engagement: PepsiCo continues to work with the RSPO and other trade associations, government agencies, non-governmental agencies and other critical stakeholders to help bring about positive change and improvements in the operation, regulation and governance of the palm oil industry. As the largest buyer of palm oil in Mexico, PepsiCo has published a detailed analysis of land tenure risks and impacts and is now carrying out training on High Conservation Values (HCV) and High Carbon Stock assessments, as well as separate capacity-building programs with the national association of palm oil mills and producers, smallholders and the federal government. Additionally, PepsiCo is a founding member of the Coalition for Sustainable Livelihoods (CSL) which aims to create sustainable commodity value chains (including palm oil) in North Sumatra and Aceh. This includes supporting efforts to prevent deforestation for palm oil production in the Leuser ecosystem. In 2018, the CSL worked on scoping and baselining of opportunities, culminating in a workshop that brought together more than 130 representatives from across government, private sector, financial institutions and civil society. Among other outcomes, participants agreed on the need to strengthen farmer livelihoods, build solutions with government and develop impact programs that can achieve scale.
Suppliers

Relevance & inclusion
Relevant, always included

Please explain
i. Example of risk considered: Approximately 40% of palm oil is grown by smallholder farmers who often lack access to expertise, capacity building and infrastructure for sustainable practices. Their participation in the shift to sustainable palm requires industry-wide collaboration to remove barriers so that certification can be achieved in markets particularly dependent on smallholders, such as Indonesia and Mexico - two of the top three countries from which PepsiCo sources palm oil. We continue to evaluate and participate in several positive impact programs that bring industry supply chain actors together to engage and help build capability for these smallholders. Our consideration of these programs is guided in part by a risk assessment process that identifies geographic areas within our supply chain that are at high risk of policy non-conformance. ii. Method of engagement: PepsiCo aims to work with suppliers to see that PepsiCo's palm oil policies are implemented in a way that supports the inclusion of smallholders. We have launched a holistic program for sustainable palm oil in Mexico that engages and involves the entire supply chain: from the national palm oil federation FEMEXPALMA to our supplier Oleofinos, to Oleopalma and the smallholders in their supply base. We are working with FEMEXPALMA to consolidate its role in representing and supporting the sustainability of the palm oil sector. This involves strengthening the expertise of the team so they can provide expert advice and support to its members through capacity building and applied research. PepsiCo is also working with RSPO and Oleopalma to support smallholder farmers in Mexico to achieve RSPO independent group certification. Smallholder farmers represent a significant portion of the palm industry, but barriers limit their access to training and certification. These trainings and developments help to increase sustainable palm practices and can positively impact livelihoods. PepsiCo is also investing in piloting studies and adapting global approaches to the Mexico context, specifically in Environmental and Social Impact Assessments and High Conservation Value (HCV). Over 44,000 hectares of Oleopalma’s supply base in Mexico were assessed through the HCV approach, which includes smallholders, medium, and large palm-producers.

F3.1a
(F3.1a) How does your organization define substantive impact on your business?

PepsiCo incorporates the following factors when defining substantive change in PepsiCo’s direct operations, revenue or expenditures from forest risks: 1) magnitude of potential impact on operating costs and/or current and future revenue; and 2) potential impact on stakeholder expectations or perceptions. Substantive change would generally be considered any material change (+/- 5%) to a site’s operating environment/costs and/or to PepsiCo’s reputation locally, regionally or globally. Should such material change occur, the impact (and any potential need to review the definition) would be reviewed and reassessed by our senior executive team. This definition of substantive change applies to both direct operations and to elements of our supply chain.

F3.1b

(F3.1b) For your disclosed forest risk commodity(ies), provide details of risks identified with the potential to have a substantive financial or strategic impact on your business, and your response to those risks.

Explanation of financial impact figure

Many of the commodities used in our products are purchased on the open market. The prices we pay for such items are subject to fluctuation, and any increases could adversely impact our operating costs and decrease our operating profit growth.

Primary response to risk

Other, please specify (Global purchasing programs and hedging strategies)
Description of response
i. Timeframe: In the normal course of business, we currently manage these risks through a variety of strategies, including global purchasing programs and systematic hedging strategies. Our global purchasing programs include fixed-price contracts, purchase orders and pricing agreements. Our hedging strategies include the use of derivatives to economically hedge price fluctuations related to a portion of our anticipated commodity purchases, primarily for agricultural products, energy and metals. ii. Response effectiveness: Commodity Risk Management provides reasonable predictability of cost across our global commodity exposures while allowing controlled flexibility to adapt to unique market circumstances. For timber, PepsiCo considers country of origin and supplier business continuity planning by region. We have identified specific goals at the regional level to address the identified risks, thereby increasing our resilience to mitigate potential impacts.

Cost of response
0

Explanation of cost of response
As our management methods for these risks occur during the normal course of business and are interrelated with several other potential risks that may not be specific to forests, we consider our specific cost to manage these risks to be zero (0).

Forest risk commodity
Timber

Type of risk

Geographical scale
Region

Where in your value chain does the risk driver occur?
Supply chain

Primary risk driver
Regulatory uncertainty

Primary potential impact
Fines, penalties or enforcement orders

Company-specific description
We are seeing increasing interest from national governments and supra-national agencies in the impact of deforestation and in setting regulations to increase transparency and reduce the environmental and social impacts of deforestation around the world. We have also seen an increase in international cooperation, which is highlighted by UN Conference of the Parties (COP)-17 and the Rio+20 Conferences that led to the REDD+ program enhancement, the U.S. Lacey Act, and the European Union Timber regulations. PepsiCo must stay informed of these developments to facilitate ongoing compliance and alignment with our deforestation-related policies.

Primary response to risk
More ambitious forest-related commitments

Description of response
i. Timeframe: Through our Forestry Stewardship Policy, Land Use Policy, Palm Oil Commitments, Palm Oil Action Plan, and Sustainable Packaging Policy, PepsiCo has created a robust framework to help achieve our goal of zero deforestation in our company-owned and operated facilities and global supply chains from direct suppliers to source by the end of 2020. ii. Response effectiveness: PepsiCo engaged Proforest to map the supply chain and support implementation of its policies related to paper packaging, including an assessment of certification schemes that PepsiCo recognizes (e.g., CERFLOR, CSA, FSC, PEFC, SFI) to analyze the extent to which such schemes deliver PepsiCo requirements outlined in our policies. In addition, Proforest conducted a rapid assessment of PepsiCo’s current performance and overview of risks involved in main regions/countries of our current paper packaging supply base. We believe this groundwork, along with our policy framework and timber specific sourcing standards and goals will help us stay ahead of regulatory requirements.

Global

Where in your value chain does the risk driver occur?
Supply chain

Primary risk driver
Increased stakeholder concern or negative stakeholder feedback

Primary potential impact
Reduced demand for products and services

Company-specific description
We are a leading global beverage and food company with brands that are respected household names throughout the world. Maintaining a good reputation globally is critical to selling our branded products. Socially Responsible Investors (SRIs), non-governmental agencies, the media and other key stakeholders have shown a growing interest in the link between timber for packaging and deforestation in company-owned operations and supply chains, leading to increased pressure on PepsiCo to respond to related concerns. PepsiCo has closely monitored consumer and customer campaigns, and their overall interest in responsible timber sourcing in our business and how we are addressing deforestation issues that may arise.

ii. Response effectiveness: To help us to better understand the risks in our supply chain, we are working with Proforest to provide traceability data of our supply chain. This includes conducting supply chain mapping with suppliers to identify high-risk suppliers, regions and countries where interventions are required. In addition, we plan to revise our paper packaging-related policies to clarify scope, make implementation targets more explicit and further develop requirements on recycled content. We believe that our policy framework and timber-specific sourcing standards and goals will help us manage the increasing reputational risk associated with timber and deforestation.

Primary response to risk
More ambitious forest-related commitments

Description of response

i. Timeframe: PepsiCo has taken a multi-faceted approach to address our palm oil supply chain by enacting a number of policies and programs on this issue. In 2015, we published the PepsiCo Palm Oil Action Plan, describing our strategy for sourcing sustainable palm oil and achieving our goal of sourcing 100% sustainable palm oil by the end of 2020. We also publicize our Forestry Stewardship Policy, Land Use Policy and annual Palm Oil Progress Reports describing strategic collaborations, use of new tools and impact programs.

ii. Response effectiveness: We are also working with Proforest to develop risk analysis and mitigation plans for key regions, as well as a verification process that stresses PepsiCo’s goals on High Carbon Stock, High Conservation Values, peatlands, land rights, including Free, Prior and Informed Consent, human rights, and no burning, as described by RSPO. This work involves a risk assessment of direct suppliers and their supply base (leveraging the mill traceability data) to identify, assess, prioritize and address top compliance risks under PepsiCo’s policies, including recommending priority mills and supply bases for verification assessments and wider engagement. We expect that this work will increase the level of engagement with suppliers to monitor implementation of continuous improvement plans. We believe our progress against our Palm Oil Action Plan and related deforestation policies will help us stay ahead of regulatory requirements.

**Description of response**

i. **Timeframe:** In 2015, we published the PepsiCo Palm Oil Action Plan, describing our strategy for sourcing sustainable palm oil and achieving our goal of sourcing 100% sustainable palm oil by the end of 2020. ii. **Response effectiveness:** Transparency is important for our risk mitigation efforts in response to non-governmental agencies’ concerns, particularly in relation to potential reputational impacts. We provide regular, detailed information on progress toward delivering our PwP goals, all of which are publicly available to stakeholders on our website. Additionally, we solicit feedback from civil society through direct meetings and workshops and consider reports by civil society and other organizations. Our stakeholder collaboration efforts, including participation in the Palm Oil Working Group of the Consumer Goods Forum, membership in the Tropical Forest Alliance 2020, and regular meetings with non-governmental agencies to discuss our efforts, exchange information and consider ways to achieve shared objectives have resulted in increased confidence in our efforts. As evidence of our progress, the WWF 2016 Palm Oil Scorecard ranked PepsiCo as leading the way in progress on essential actions taken to source sustainable palm oil. In July 2017, we formalized a grievance mechanism for our agricultural supply chain, allowing third parties to raise concerns regarding compliance within our agricultural supply chain and mitigating potential reputational impacts.

Company-specific description & strategy to realize opportunity

i. Explanation of opportunity: PepsiCo understands the unique role packaging holds in shaping the way our products are presented to consumers, customers and communities. In addition to understanding its necessary role in protecting the quality and experience consumers have with our products, we believe that our most significant influence on forests is through our sourcing of paper and wood-based products and raw agricultural materials. ii. Explanation of strategy: Through our Forestry Stewardship Policy, Land Use Policy, Palm Oil Commitments, and Sustainable Packaging Policy, PepsiCo has created a robust framework to help achieve our goal of zero deforestation in our company-owned and -operated facilities and global supply chains from direct supplier to source by the end of 2020. PepsiCo seeks to purchase only responsibly sourced wood fiber products and will not knowingly accept from its supply chain paper-based packaging that may contain wood fiber harvested illegally or sourced from protected forest areas. We are focused on developing and maintaining a deeper understanding of our paper-based packaging supply chain and our supply base sourcing as close to the forest of origin as possible. iii. Implementation case study: PepsiCo is working with our suppliers to help them become more environmentally sustainable in their practices by following credible forestry standards and purchasing fiber only from sources that support responsible forest management, as outlined in our policies. PepsiCo engaged Proforest to map the supply chain and support implementation of its policies related to paper packaging, including an assessment of certification schemes that PepsiCo recognizes (e.g., CERFLOR, CSA, FSC, PEFC, SFI) to analyze the extent to which they deliver PepsiCo requirements outlined in our policies. In addition, Proforest conducted a rapid assessment of PepsiCo’s current performance and overview of risks involved in main regions/countries of our paper packaging supply base.

Company-specific description & strategy to realize opportunity

i. Explanation of opportunity: Socially Responsible Investors, non-governmental agencies, the media and other key stakeholders have shown a growing interest in the link between palm oil and deforestation in our company-owned operations and supply chains. PepsiCo has closely monitored consumer and customer campaigns and general interest in responsible palm oil sourcing in our business. As awareness around palm oil grows, improved consumer response to products carrying RSPO-certified sourced material represents a potential opportunity to grow our revenue. ii. Explanation of strategy: In 2015, we published the PepsiCo Palm Oil Action Plan, describing our strategy for sourcing sustainable palm oil. The action plan includes our commitment to source 100% physically-certified sustainable palm oil by the end of 2020, achieve and maintain PepsiCo and our suppliers’ compliance with our various deforestation-related policies and Supplier Code of Conduct; engage suppliers on various capacity-building initiatives; and
achieve greater traceability. We disclose results of our work annually in Palm Oil Progress Reports, synchronized with our Annual Communication of Progress to the RSPO. iii. Implementation case study: In 2018, we achieved 52% physically-certified sustainable palm oil and addressed the gap by purchasing RSPO credits. We encouraged our direct suppliers to be RSPO members; since 2017, 100% of our direct suppliers have been RSPO members. We are also mapping to the mill of origin and aiming for 100%, with a concurrent goal to achieve traceability to the farm/plantation by the end of 2020. In 2018, 97% of our supply was traceable to the mill. Since launching our Traceability to Plantation Protocol, 26 suppliers representing 32% of our volume reported traceability to plantation in 2018. Our Supplier Scorecards provide a means to track and encourage our suppliers’ progress towards establishing policies and programs to enhance performance and capability in sustainable palm. Our Palm Oil Traceability Protocol, developed in collaboration with palm experts and industry partners, supports the development of better information systems to help achieve our goals and prioritize opportunities for improvement. Finally, our impact programs prioritize capacity building, particularly training and development.

<td>1</td>
<td>Company-wide</td>
<td>Commitment to eliminate deforestation and/or conversion of forests</td>
<td>PepsiCo’s standards are based on international conventions and reference best practices established by forest-related initiatives and industry groups. Specific to forests-related issues, PepsiCo’s publicly available Forestry Stewardship Policy and Land Use Policy are important components of the more comprehensive PepsiCo Responsible Sourcing Guidelines, which applies to all PepsiCo global operations and global supply chains from direct supplier to source. Details in these policies regarding our operational standards, references, targets and business context demonstrate a robust framework to help achieve our goal of zero deforestation in our company-owned and -operated facilities and global supply chains from direct supplier to source by the end of 2020. Among these, PepsiCo aims to adhere to the following principles across all commodities: (i) comply with applicable legal requirements of each country in which we operate and from which we source; (ii) No further development on High Carbon Stock Forests; (iii) No further development on High Conservation Values Forests; (iv) No new conversion of peatlands; and (v) Free, Prior and Informed Consent as outlined in our Land Use Policy. In addition, PepsiCo intends to: (i) Engage with appropriate industry and other groups to improve our understanding of deforestation issues, adapt our policy and achieve our goals; (ii) Provide appropriate grievance mechanisms for suppliers to report suspected breaches; (iii) Leverage our Supplier Code of Conduct as a means of communicating PepsiCo’s Forestry Stewardship Policy and associated commitments to our suppliers; and (iv) Periodically report on our performance against this policy and its associated commitments. Our policies reflect PepsiCo’s commitment to doing business the right way and transparently communicating to stakeholders our responsibility to ensure that we and our suppliers practice responsible forestry stewardship. The Public Policy &amp; Government Affairs group reviews policies every two years and amends them as appropriate. Relevant policies are available via our Sustainable Sourcing page: <a href="https://www.pepsico.com/sustainability/sustainable-sourcing">https://www.pepsico.com/sustainability/sustainable-sourcing</a></td>

Our policies reflect PepsiCo's commitment to doing business the right way and transparently communicating to stakeholders our, and our suppliers' responsible forestry stewardship. Recognizing potential environmental benefits, including climate and biodiversity, as well as human rights, we have committed to source 100% physically-certified sustainable palm oil by the end of 2020. We published a Palm Oil Action Plan in 2015 describing our operational standards, references, targets and business context behind our sustainable palm oil practices. Subsequent annual progress reports detail additional interim goals and specific activities undertaken to achieve our goals. Our policy and commitments apply to all of our products, regardless of the source of production. Our June 2018 palm oil policy update provides our long-term vision for a sustainable palm oil sector and updates our commitments to no deforestation, no development on peatlands, and no exploitation of indigenous peoples and local communities (“NDPE commitments”). Policies are reviewed biannually and amended as appropriate. Our newly published 2018 Progress Report details our commitment as a founding member of the Coalition for Sustainable Livelihoods to prevent deforestation for palm oil production in the Leuser ecosystem. The Public Policy & Government Affairs group reviews policies biannually and amends them as appropriate. Relevant policies are available online at the following links:

i. The Board oversees PepsiCo's integrated risk management framework designed to identify, assess, prioritize, address, manage, monitor and communicate our top strategic, financial, operating, business, compliance, safety, reputational and other risks, including forests-related issues across the organization. The PepsiCo Risk Committee (PRC) is a cross-functional diverse group that meets regularly and is responsible for reporting progress on risk mitigation efforts to the Board. The Board receives updates on key risks throughout the year. Key risks related to forests-related issues identified by the Company are included in our 2018 Annual Report on Form 10-K. ii. The governance mechanisms selected contribute to the Board’s oversight of forest issues in that they reflect PepsiCo’s comprehensive approach to sustainability. The full Board considers sustainability issues an integral part of its business oversight, as sustainability topics are integrated into, and not separate from, our business strategy.
(F4.3) Provide the highest management-level position(s) or committee(s) with responsibility for forests-related issues (do not include the names of individuals).

<table>

<tbody>
<tr>
<td>Other C-Suite Officer, please specify (Chief Scientific Officer)</td>
<td>Both assessing and managing forests-related risks and opportunities</td>
<td>Quarterly</td>
<td>i. Rationale for responsibility and frequency of reporting: PepsiCo’s chief scientific officer, who reports directly to our chairman and CEO, oversees the company’s sustainability program. The responsibility lies with this individual because he brings deep science-based knowledge and insights to guide the company’s product portfolio transformation efforts, as well as an intimate understanding of the challenges and opportunities that lie at the intersection of food, the environment and people. He is involved in the day-to-day management of our strategy toward delivery of our sustainability agenda, and his responsibilities include providing strategic direction, guidance and leadership on critical forests-related issues facing the company and actions the company must take. Forests-related issues monitoring and overseeing the delivery of our forests-related goals fall directly under the responsibilities of the chief scientific officer. Each quarter, he is apprised of our progress towards our climate goal and related issues. Based on this, he is involved in aligning the PepsiCo Executive Committee (PEC) and the board on strategic decisions toward mitigating forests-related risks, enhancing PepsiCo’s reputation and positioning the business for future success.</td>

Please explain
PepsiCo engaged Proforest to map the supply chain and support implementation of its policies related to paper packaging, including an assessment of certification schemes that PepsiCo recognizes (e.g., CERFLOR, CSA, FSC, PEFC, SFI) to analyze the extent to which they deliver PepsiCo requirements, as outlined in our policies. In addition, Proforest conducted a rapid assessment of PepsiCo's current performance and overview of risks involved in main regions/countries of our current paper packaging supply base. We have also developed new form contract language for our sourced materials to be FSC- and SFI-certified, with the intention of further promoting compliance with our policy criteria. As we undertake new contracts, PepsiCo is negotiating by region to determine the capabilities to source certified materials. We have identified Russia, China and parts of Southeast Asia as our primary focus to mitigate risks. PepsiCo recognizes the importance of having a credible system for third parties to raise concerns where they believe our standards are not being met, such as any compromise of Free, Prior and Informed Consent principles, our zero net deforestation and forest degradation, and potentially illegal and/or controversial activities occurring in our agricultural supply chain. Our Speak Up Hotline provides a means to report suspected violations of our policies or applicable law. PepsiCo’s grievance mechanism for our agricultural supply chain complements our existing program to help prevent, identify and manage environmental and social concerns throughout our value chain, including those associated with timber. This allows third parties to raise concerns that our environmental and social goals and policies may not be upheld within our agricultural supply chain. Our approach is available here: https://www.pepsico.com/docs/album/esg-topics-policies/agricultural-supply-chain-grievance-mechanism-summary.pdf?sfvrsn=8d8bccc3_6

Please explain
In 2017, PepsiCo launched our verification process that stresses PepsiCo’s goals on HCS, HCV, peatlands, land rights, FPIC, human rights, and no burning, as described by RSPO. Direct suppliers undergo an independent third-party review of the data that is sent to PepsiCo, giving us greater confidence in the integrity of the data used to evaluate our supply chain risks. RSPO’s Principles & Criteria (P&C) provided us with the framework for a holistic capacity-building program in Mexico. At the federal level, we are working with FEMEXPALMA to strengthen the team’s expertise so they can provide expert support to its members through capacity building and applied research. At the smallholder farm level, PepsiCo engages with Oleopalma to support smallholders to achieve the RSPO independent group certification. PepsiCo is also investing in piloting studies to adapt global approaches to the Mexico context, specifically in Environmental and Social Impact Assessments (ESIA) and HCV. The program’s objectives include 1) Improve productivity and livelihoods of smallholders through capacity building and knowledge sharing on the benefits of sustainable production - including the participation of 1,000 producers and 1,200 field workers, 2) Ensure an efficient, inclusive supply chain by collaborating across the entire supply chain, 3) Secure sustainable palm oil through increased implementation of best agricultural practices, 4) Improve the quality of life for producers and protect their land rights, while fully preserving forests and biodiversity through sustained commitment to no deforestation, no development on new peat, and no exploitation of rights of indigenous peoples and local communities’ (NDPE) commitments, and 5) Serve as a model for sustainable development for the palm industry in Mexico by demonstrating impact and seek to scale the program through partnerships. Additionally, implementation of our supplier scorecard has seen suppliers improve their overall performance by 39% against the 2017 baseline. The scorecard mechanism supports our efforts to build suppliers’ capability to deliver NDPE compliant palm oil, and to address non-compliances found in our supply chain. Finally, our grievance mechanism complements our existing agricultural program to help prevent, identify and manage environmental and social concerns throughout our value chain.

Please explain
i. Why and how target was chosen: PepsiCo seeks to purchase only responsibly sourced wood fiber products and will not knowingly accept from its supply chain paper-based packaging that may contain wood fiber harvested illegally or sourced from protected forest areas. PepsiCo is focused on developing and maintaining a deeper understanding of our paper-based packaging supply chain and our supply base sourcing as close to the forest of origin as possible. This is an extremely complex undertaking since PepsiCo does not purchase direct raw material from the forest. However, such action is important to achieving our ultimate goal of only purchasing responsibly sourced wood fiber products. PepsiCo works with its suppliers to help them become environmentally sustainable in their practices by following credible forestry standards and purchasing their wood fiber only from sources that support responsible forest management, as outlined in our policies. PepsiCo recognizes the forestry standards below as credible within their scope and requires our suppliers to commit to utilizing the appropriate standard: CERFLOR, CSA, FSC, PEFC, and SFI.

ii. Strategy to meet target: To enable a greater understanding of, and visibility into, our supply chain, in 2016, PepsiCo began working with Proforest to trace the supply chain and support implementation of our policies related to paper packaging. For example, Proforest conducted an assessment of certification schemes that we recognize (e.g., CERFLOR, CSA, FSC including FSC Mixed, PEFC, SFI) to analyze the extent to which they deliver PepsiCo requirements, as outlined in the Forestry Stewardship, Land Use and Sustainable Packaging policies. In addition, Proforest conducted a rapid assessment of our current performance and overview of risks involved in main regions/countries of our current paper packaging supply base. The supply chain mapping project commenced in 2016 and is ongoing. In 2017, PepsiCo worked with a Tier-1 supplier to develop new contract language for sustainably-sourced materials, further promoting compliance with our policy criteria. As we renew expiring contracts in 2018, PepsiCo has been negotiating by region to determine our suppliers’ capabilities to source certified materials. We have seen our percent certified material increase in several high-risk priority regions, including Russia, China, and Thailand.

**Please explain**

i. Why and how target was chosen: In 2010, PepsiCo committed, through the RSPO, to source exclusively 100% RSPO-certified sustainable palm oil by 2015. In 2013, PepsiCo further strengthened this commitment to purchasing 100% physically RSPO-certified palm oil by the end of 2020, providing additional visibility into our palm oil supply chain. The RSPO has played a leading role in mobilizing commercial activity to encourage sustainable supply and setting baseline standards for sustainable palm oil, informing our choice to set this target. While we are committed to the RSPO and its process and standards, we are also looking to go beyond current RSPO standards in order to see further protection of forests, peatlands and human rights. Through our policies and actions, PepsiCo seeks to support the growth of sustainable palm oil, first by addressing standards in our own supply chain and then by working with others to drive improvement more widely. We believe that fulfillment of these policies and commitments will make our supply chain more secure and support stable social, economic and environmental conditions for producers, mills and the communities they support.

ii. Strategy to meet target: As more mass balance physically-certified sustainable palm oil (CSPO) becomes available, we plan to strategically increase our use as we move toward our goal to source 100% physically-certified sustainable palm oil by the end of 2020. As we build our use of physically sourced palm oil, we plan to continue to purchase 100% RSPO-certified palm oil by leveraging RSPO credits. As the global supply chains for RSPO physical palm oil become more available, we plan to increase the use of mass balance CSPO and rely less upon the RSPO credits. In 2018, we achieved 52% physically-certified sustainable palm oil, exceeding our interim target of 50% for 2018. Contrary to reports of a surplus of RSPO-certified palm oil, physically-certified supply is limited or non-existent in some regions including, for example, some markets in the Americas. To address this problem, PepsiCo also seeks to build certification capacity on our journey to 100%.

Please explain
i. Why and how target was chosen: Palm oil is the most widely used edible oil in the world and an ingredient in several PepsiCo food products. Like many of our stakeholders, though, PepsiCo has ongoing concerns about how some palm oil is produced. Rainforest conversion, biodiversity loss and human rights abuses persist in various producing regions. Through our policies and actions, PepsiCo seeks to support the growth of sustainable palm oil, first by addressing standards in our own supply chain and then by working with others to drive improvement more widely. We believe that fulfillment of these policies and commitments will make our supply chain more secure and support stable social, economic and environmental conditions for producers, mills and the communities they support. Our traceability target was chosen to provide more visibility into our supply chain to achieve our sustainable palm oil goals.

ii. Strategy to meet target: PepsiCo worked with One Peterson and Proforest to develop and implement PepsiCo's Palm Oil Traceability Protocol, launched in 2017. The protocol was distributed to all direct suppliers along with a recommended quarterly reporting template, which requires the names of all palm oil and palm kernel oil mills, their geo coordinates and the percentage of PepsiCo's volume that is traceable to the mills. Additionally, we implemented a training program in both English and Spanish, and we maintain a help desk with One Peterson to provide ongoing assistance with the collection of timely and accurate data. We continue to make progress toward our goal of 100% traceability to the mill and, at the end of 2018, we estimated that approximately 97% of the palm oil we used was traced to specific mills, up from 94% in 2017, 89% in 2016 and 65% in 2015. We will continue working with our suppliers to increase visibility of the mills in our palm oil supply chain through various engagement efforts, including our mill traceability data verification protocol. In 2017, we established an interim definition for farm/plantation traceability. Since launching our Traceability to Plantation Protocol, 26 suppliers representing 32% of our volume reported traceability to plantation in 2018; our goal is to achieve traceability to the farm/plantation by the end of 2020.

Description of traceability system

PepsiCo is implementing data systems and processes that allow us to identify the mills in our supply chain. We worked with One Peterson and Proforest to develop a Palm Oil Traceability Protocol that describes the traceability reporting requirements for suppliers and verification of this data. As required by the Traceability Protocol, suppliers must report quarterly on the name of all palm oil mills from which palm oil is sourced, geo coordinates of the mills and traceability percentage. Using a risk-based approach, the palm oil data submitted by suppliers are subject to verification by a third party to assess accuracy and completeness. Control Union, SGS, Bureau Veritas and DNVGL were approved as independent third-party providers. A training program on how to use the protocol was implemented for suppliers. We also established a traceability help desk with One Peterson to provide suppliers with on-going assistance. With this significant level of effort, we have established mill-level traceability accounting for over 97% of our source volume in 2018; since the start of the program, mill traceability has increased by over 25%. In addition, 22% of our Tier 1 suppliers independently verified their mill traceability data in 2018. Our goal is for all of our upstream direct suppliers to complete a downstream verification of their mill data by the end of 2019. PepsiCo is also committed to achieving traceability to plantation (TTP) in our supply chain. In 2017, we established an interim definition for farm/plantation traceability, and in 2018, we engaged with our partners to understand how PepsiCo can work with the industry to achieve this. Since launching our Traceability to Plantation Protocol, 26 suppliers representing 32% of our volume reported traceability to plantation in 2018; our goal is to achieve traceability to the farm/plantation by the end of 2020.

Please explain
i. Actions: As more mass balance physically-certified sustainable palm oil (CSPO) becomes available, we plan to strategically increase our use as we move toward our goal to source 100% physically-certified sustainable palm oil by the end of 2020. As we build our use of physically certified palm oil, we plan to continue to purchase 100% RSPO-certified palm oil by leveraging RSPO
credits. As the global supply chains for RSPO physical palm oil become more available, we plan to increase the use of mass balance CSPO and rely less upon the RSPO credits. In 2018, we achieved 52% physically-certified sustainable palm oil, exceeding our interim target of 50% for 2018. To address the problem of limited physically-certified palm oil, PepsiCo also seeks to build certification capacity on our journey to 100%. ii. Examples: Since joining RSPO in 2009, PepsiCo has supported the organization and worked with our suppliers to promote the benefits of membership, including benefits to the environment, workers, local communities and business. We also support RSPO NEXT, an advanced certification scheme that incorporates additional protections for forests, peatlands and human rights, and we look forward to an overall strengthening of the RSPO standard based on the extensive review process that RSPO intends to complete in 2018. Since 2017, 100% of our direct suppliers have been RSPO members. Additionally, our supplier scorecards emphasize policy, engagement, certification and grievances. This tool enables us to engage directly with suppliers, gauge their status on key performance measures and guide a process of continuous improvement to enable them to meet all of PepsiCo’s policy commitments, including our commitment to 100% physical RSPO-certified palm oil. Sustainable palm oil production and sourcing requires collaboration and alignment across the supply chain. These supplier scorecards allow PepsiCo to work in a consistent way with our suppliers to help achieve this. Implementation of our supplier scorecard has seen our suppliers improve their overall performance by 39% in 2018, against the 2017 baseline.

<td>i. Monitoring: PepsiCo utilizes Sedex Members Ethical Trade Audit (SMETA) audit data and third-party support from Proforest to assess risks associated with this effort. Our internal Sustainable Sourcing Program (SSP) assesses risk and monitors supplier compliance with our Supplier Code of Conduct through scored self-assessments and third-party auditing of our most business-critical direct suppliers and contract manufacturing and co-packing locations. SSP audits leverage SMETA 4-Pillar requirements. In 2018, our SSP conducted or recognized over 960 on-site audits of our first-tier suppliers across 56 countries. PepsiCo engaged Proforest to represent us in evaluating beyond our first-tier suppliers; Proforest engages directly with the mills to better understand sustainable sourcing in high-risk regions. This monitoring combination provides visibility on the ground, as well as ongoing engagement beyond standardized auditing. ii. Example: In 2017, Proforest conducted a specific risk assessment for Russia, having previously identified the country as high risk based on environmental, social and legal criteria. Data assessed included supplied volumes, certified volumes, type of material and certification schemes, and included direct engagement with 11 high-risk suppliers to map supply chains back to forest origin. The assessment determined that further work on prioritizing FSC certification in Russia is needed, such as working with non-certified suppliers to achieve certification and independent auditing to assess compliance with</td>

<td>i. Strategy: PepsiCo is working to realize our goal of zero deforestation in our company-owned and -operated facilities and global supply chain from direct supplier to source by the end of 2020. We have committed to source 100% physically-certified sustainable palm oil by the end of 2020, publishing a Palm Oil Action Plan in 2015 describing our strategy and subsequently releasing annual Palm Oil Action Plan Progress Reports. We encouraged our direct suppliers to be RSPO members; since 2017, 100% of our direct suppliers have been RSPO members. Supplier Scorecards help to track and encourage our suppliers’ progress towards sustainable palm. Our palm traceability protocol supports the development of better information systems to help achieve our goals and prioritize opportunities for improvement. Finally, our impact programs prioritize capacity building, particularly training and development. ii. Examples: In 2018, we achieved 52% physically-certified sustainable palm oil and addressed the gap by purchasing RSPO credits. To further our progress, PepsiCo works with suppliers to help ensure compliance with our Policy and support their sustainability efforts. An analysis of Supplier Scorecard results, in consultation with our suppliers, informed our transparency efforts including one-on-one sessions with subject matter experts and multilingual live webinars that were recorded for ease of access. Suppliers scoring in the top 25% were approached to partner with us on industry leading protocols and practices, such as traceability to mill verification and NDPE policy compliance through participation in the NDPE framework. In 2018, 28 on-site audits were conducted or recognized via our Sustainable Sourcing Program. Our palm traceability protocol requires direct suppliers provide a full list of mills supplying them on a quarterly basis, including geo coordinates, parent company of the mills and certification/verification status, and undergo an independent third-party review of the reported data. In 2018, we built capacity of 30 direct suppliers to enable them to create, improve and implement NDPE policies, through webinars delivered in English and Spanish. iii. Engagement: 100% of direct suppliers are required to provide operational data on a quarterly basis. Additionally, in 2018, 69% of our direct suppliers of palm oil completed our Supplier Code of Conduct training.</td>

**Are you working beyond your first-tier supplier(s) to manage and mitigate forests-related risks?**

<table>
<thead>
<tr>
<th>Material</th>
<th>Working beyond first tier</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Timber</td>
<td>Yes, working beyond first tier</td>
<td>PepsiCo is focused on developing and maintaining a deeper understanding of our paper-based packaging supply chain and its supply-base sourcing as close to the forest of origin as possible. This is an extremely complex undertaking since PepsiCo does not purchase direct raw material from the forest. However, such action is important to achieving our ultimate goal of purchasing only responsibly-sourced wood fiber products. PepsiCo works with our suppliers to help them become environmentally sustainable in their practices by following credible forestry standards and purchasing their wood fiber only from sources that support responsible forest management, as outlined in our policies. To this end, PepsiCo engaged Proforest to represent us in evaluating beyond our first-tier suppliers; Proforest engages directly with the mills to better understand sustainable sourcing in high-risk regions. This monitoring combination provides visibility on the ground as well as ongoing engagement beyond standardized auditing. For example, Proforest conducted a specific risk assessment for Russia, having previously identified the country as high-risk based on environmental, social and legal criteria. Data assessed included supplied volumes, certified volumes, type of material and certification schemes, and included direct engagement with 11 high-risk suppliers to map supply chains back to forest origin. Applying these learnings into our procurement strategy has seen our percent certified material increase from 5% to 80% as we renew contracts in Russia.</td>
</tr>
<tr>
<td>Palm Oil</td>
<td>Yes, working beyond first tier</td>
<td>We work with suppliers to see that PepsiCo’s palm oil policies are implemented in a way that supports the inclusion of smallholders. We have created a 3-year holistic, inclusive and collaborative palm oil sustainability program in Mexico that engages the supply chain at three different levels: at the sector level (with national palm oil federation FEMEXPALMA), in the PepsiCo Supply Base (with our supplier Oleofinos) and with smallholders (with Oleopalma and the smallholders in their supply base). We are working with FEMEXPALMA to consolidate its role in representing and supporting the sustainability of the palm oil sector. This involves strengthening the team’s expertise so they can provide support to its members through capacity building and applied research. At the smallholder farm level, PepsiCo engages with Oleopalma to identify areas of improvement for farmers through conducting surveys, and with these results help to implement sustainable practices. Through the initiative, smallholders will be supported to achieve the RSPO independent group certification. PepsiCo is also investing in piloting studies to adapt global approaches to the Mexico context, specifically in Environmental and Social Impact Assessments (ESIA) and High Conservation Values (HCV). The program’s objectives include 1) Improve productivity and livelihoods of smallholders through capacity building and knowledge sharing on the benefits of sustainable production - including the participation of 1,000 producers and 1,200 field workers, 2) Ensure an efficient, inclusive supply chain by collaborating across the entire supply chain - from the national palm oil federation to our supplier and smallholders in their supply base, 3) Secure sustainable palm oil through increased implementation of best agricultural practices, 4) Improve the quality of life for producers and protect their land rights, while fully preserving forests and biodiversity through sustained commitment to no deforestation, no development on new peat, and no exploitation of rights of indigenous peoples and local communities’ (NDPE) commitments, and 5) Serve as a model for sustainable development for the palm industry in Mexico by demonstrating impact and seek to scale the program through partnerships. Our policy and commitments apply to all our products and suppliers, regardless of the source of production.</td>

(F6.9) Do you participate in external initiatives or activities to further the implementation of your policies concerning the sustainability of your disclosed commodity(ies)?

**Forest risk commodity**

Timber

**Do you participate in activities/initiatives?**

Yes

**Activities**

Involved in multi-partnership or stakeholder initiatives

**Initiatives**

UN Global Compact
Tropical Forest Alliance 2020 (TFA)
The Consumer Good Forum (CGF)
Other, please specify (Sustainable Packaging Coalition, EUROPEN)

**Please explain**

PepsiCo is an active member of the Consumer Goods Forum (CGF), a manufacturing and retail industry group that has adopted a resolution concerning deforestation. The CGF Resolution on Deforestation states, “As the Board of the Consumer Goods Forum, we pledge to mobilize resources within our respective businesses to help achieve zero net deforestation by the end of 2020. We look to achieve this both by individual company initiatives and by working with governments and NGOs.” PepsiCo’s Chairman and CEO serves on the CGF Board of Directors. PepsiCo is also an active member of The European Organization for Packaging and the Environment, known as EUROPEN, serving on the Executive Committee and Scientific & Regulatory Affairs Committee, to drive forward our Global Sustainable Packaging Policy (see: https://www.pepsico.com/docs/album/esg-topics-policies/pepsico-sustainable-packaging-policy.pdf?sfvrsn=d808643c_4) As a member of the Tropical Forest Alliance 2020 (TFA), PepsiCo supports the TFA’s mission to foster public-private partnerships in which partners take voluntary actions, individually and collaboratively, to reduce tropical deforestation.

**Do you participate in activities/initiatives?**

Yes

**Activities**

Involved in multi-partnership or stakeholder initiatives

**Initiatives**

Tropical Forest Alliance 2020 (TFA)
The Consumer Good Forum (CGF)
Roundtable on Sustainable Palm Oil (RSPO)
Other, please specify (Coalition for Sustainable Livelihoods (CSL))

**Please explain**

To support the implementation of our action plan, we are working with several stakeholder initiatives, industry platforms and non-governmental agencies. We continued our participation in CGF’s palm oil working group and contributed to the group’s efforts to develop an industry point of view on the RSPO Principles & Criteria (P&C’s) update, and in 2018, we participated in the official revision of RSPO’s 2013 P&C’s. To support the RSPO, PepsiCo encouraged our direct suppliers to be RSPO members; since 2017, 100% of our direct suppliers have been RSPO members. During 2018, PepsiCo convened industry representatives to develop and trial an NDPE Implementation Framework tool which aims to monitor the progress of mills and producers and report on NDPE compliant volumes. PepsiCo collaborated with companies including Cargill to pilot this framework, co-convening two workshops alongside the RSPO roundtable (RT) meetings to bring a wider group of companies together to support the framework’s development and roll out. In 2019, PepsiCo will support the scaling-up of this approach through further collaboration, by piloting and implementation of the framework within our supply chain. In 2017, we established an interim definition for farm/plantation traceability. Since launching our Traceability to Plantation Protocol, 26 suppliers representing 32% of our volume reported traceability to plantation in 2018; our goal is to achieve traceability to the farm/plantation by the end of 2020. As a member of TFA, PepsiCo supports the TFA’s mission to foster public-private partnerships in which partners take voluntary actions, individually and collaboratively, to reduce tropical deforestation. PepsiCo is an active member of AIM-Progress, which focuses on improving sustainability within supply chains through mutual recognition and capacity building. Finally, PepsiCo became a founding member of the Coalition for Sustainable Livelihoods (CSL). CSL is a group of civil society and private sector organizations with a shared interest in sustainable development, active investments in the Aceh and North Sumatra provinces of Indonesia, and a strong desire to work collaboratively with government. The coalition members have agreed to work collectively to achieve common objectives for smallholder livelihoods, sustainable agricultural production and conservation in North Sumatra and Aceh.

F7. Linkages and trade-offs

F7.1

(F7.1) Has your organization identified any linkages or trade-offs between forests and other environmental issues in its direct operations and/or other parts of its value chain?

Yes

F7.1a

(F7.1a) Describe the linkages or trade-offs and the related management policy or action.

<table>
<thead>
<tr>
<th>Linkage/tradeoff</th>
<th>Linkage</th>
<th>Description of linkage/tradeoff</th>
<th>Policy or action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Decreased GHGs emissions</td>
<td>By 2030, it is expected that the world will need to meet rising food demand by increasing production by 50% or substantially reducing the 35-50% of food that is currently wasted or lost through the value chain. If the world follows business as usual, greenhouse gas (GHG) emissions are expected to increase significantly. Managing the interrelationship between agriculture, climate change, energy and water in terms of both adaptation and mitigation will be crucial for food and beverage businesses seeking long-term, sustainable growth. PepsiCo’s specific goals to help address climate change reflect a linkage to our forests-related efforts. We support the Paris Agreement on Climate Change and have an ambitious science-based goal to reduce absolute GHG emissions by at least 20% across our value chain by 2030. To achieve this goal, we must reduce emissions in our agricultural supply chain, including palm oil, by implementing our NDPE policy commitments.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>i. Impact: PepsiCo measured emissions associated with palm oil for the first time in 2017. Emissions totaled 1,250,000 mt CO2e in 2018, calculated for volume coming from Indonesia and Malaysia using secondary data and literature review. We expect to see these emissions decrease as we convert our sourcing to certified sustainable. Additionally, PepsiCo estimates purchased goods and services emissions associated with agriculture/forestry to be 18,020,530 mt CO2e. This data is vital for PepsiCo to manage our scope 3 emissions. ii. Integration into strategy: PepsiCo supports the Paris Agreement on Climate Change and has an ambitious science-based goal to reduce absolute greenhouse gas emissions by at least 20% across our value chain by 2030. Our goal covers our entire value chain (scope 3) and has been approved by the Science Based Targets Initiative, which means that PepsiCo is doing its part to help limit global temperature increase to 2°C Celsius. To achieve this goal, we must reduce emissions in our agricultural supply chain, including palm oil, by implementing our NDPE policy commitments. This directly ties to PepsiCo’s efforts to realize our goal of zero deforestation in company-owned and -operated facilities and global supply chains from direct supplier to source by the end of 2020. Recognizing potential environmental benefits, including climate and biodiversity, as well as human rights, we have committed to source 100% physically-certified palm oil by the end of 2020.</td>

F8. Verification

F8.1

(F8.1) Do you verify any forests information reported in your CDP disclosure?

No, but we are actively considering verifying in the next two years
F9. Barriers and challenges

F9.1

(F9.1) Describe the key barriers or challenges to avoiding forests-related risks in your direct operations or in other parts of your value chain.

**Forest risk commodity**
Timber

**Coverage**
Supply chain

**Primary barrier/challenge type**
Supply chain complexity

**Comment**
With respect to deforestation-free supply chains, barriers and challenges include:
- Our ability to trace supply, meaning the ability of a buyer or end user to have accurate data on the specific sources of its purchased commodities, working back through direct suppliers all the way to individual plantations
- Availability of public sector initiatives whereby government legislators, regulators and other officials work in concert with the private sector to incentivize forest conservation, protect forests through effective enforcement of laws and anti-corruption measures, improve transparency and achieve synergy between laws/regulations and certification schemes
- Ability to identify areas at high-risk of deforestation in order to prioritize action
- Root causes of deforestation such as poverty and the inability of small holders to produce commodities sustainably
- Lack of availability of credibly-certified volumes for certain commodities in some markets
- Lack of universally-accepted definitions and protocols, leading to varying certifications and related claims
- Our ability to collaborate with key private, public and non-governmental agency actors to achieve meaningful results.
